BS-M(CE)301	MATHEMATICS- III	2L + 1T	3 Credits			
Module 1	Partial Differential Equation(PDE): Definition of Partial Differential Equations, First order partial differential equations, Solutions of first order linear PDEs, Solution to homogenous and non-homogenous linear PDEs of second order by complimentary function and particular integral method. Second-order linear equations and their classification, Initial and Boundary Conditions, D'Alembert's solution of one dimensional wave equation, Solution of one dimensional heat equation and two dimensional Laplace equation by separation of variables					
Module 2	Transform Calculus : Laplace Transform : Laplace transform and its existence theorem, Properties of Laplace transform(Linearity, Shifting, Change of scale), Laplace transform of derivatives, Multiplication by t^n , division by t , Laplace transform of periodic functions and step functions. Evaluation of improper integrals by Laplace transform, Finding inverse Laplace transform by different methods, Convolution theorem (statement only), Solving ODEs and PDEs by Laplace transform.					
	transform. Fourier Transform : Fourier Integral theorem(Statement transform and its properties (Linearity, Shifting, Cham Modulation), Fourier transform of derivatives, theorem(statement only), Inverse Fourier transform, Applicat	only), Fourier age of scale, Convolution ion of Fourier	4L			
Module 3	Probability : Basic Probability Theory : Classical definition and it Axiomatic definition, Some elementary deduction: $P = P(A) \le 1$, $P(A') = 1 - P(A)$ etc. where the symbols ha meanings, Frequency interpretation of probability. Add two events (proof) & its extension to more than two even only) and related problems, Conditional probability and events , Extension to more than 2 events (pairwise independence) , Multiplication rule, Examples, Bay (statement only) and related problems.	s limitations, $(\emptyset) = 0, 0 \le$ ve their usual ition rule for its (statement Independent and mutual ve's theorem	4L			
Moulle 3	Random Variable & Probability Distributions : In random variable, Continuous and discrete random Probability density function & probability mass function variable only, Distribution function and its properties (we Examples, Definitions of Expectation & Variance, examples. Some Important Discrete Distributions: Binome distributions and related problems. Some Important Distributions: Uniform, Exponential, Normal distribution problems. Determination of Mean & Variance for Binome and Uniform distributions only.	Definition of n variables, on for single ithout proof), properties & ial & Poisson Continuous as and related mial, Poisson	4 L			

Module 8	Graph 7 Basic c Circuit, represen Basic cc Prim's a	Theory: oncept of graph, Isomorphism, Eulerian and Hamiltonian gra- tation of graph: Incidence matrix a oncept of Tree, Binary tree, Spanr lgorithm for finding minimal span	Walk, Path, Cycle, ph, Digraph, Matrix and Adjacency matrix, ning tree, Kruskal and ning tree.	10 L

BS-CE301	BIOLOGY (BIOLOGY FOR ENGINEERS)	2L + 0T	2 Credits
Module 1	 Introduction: Bring out the fundamental differences between science and endrawing a comparison between eye and camera, Bird flying Mention the most exciting aspect of biology as an independend discipline. Why we need to study biology? Discuss how observations of 18th Century that lead to major discoveries. Ex Brownian motion and the origin of thermodynamics by reforiginal observation of Robert Brown and Julius Mayor. These whighlight the fundamental importance of observations in a inquiry. Purpose: To convey that Biology is as important a scientific Mathematics, Physics and Chemistry 	ngineering by and aircraft. lent scientific w biological xamples from ferring to the examples will any scientific discipline as	2L
Module 2	Classification: Hierarchy of life forms at phenomenological level. A common to this hierarchy Classification. Discuss classification based on (Unicellular or multicellular (b) ultrastructure- prokaryotes o (c) energy and Carbon utilization -Autotrophs, heterotrophs (d) Ammonia excretion – aminotelic, uricoteliec, u Habitataacquatic or terrestrial (e) Molecular taxonomy- kingdoms of life. A given organism can come under different c on classification. Model organisms for the study of biology different groups. E.coli, S.cerevisiae, D. Melanogaster, C. Thaliana, M. musculus Purpose: To convey that classification per se is not what biology The underlying criterion, such as morphological, biochemical be highlighted.	hread weaves a) cellularity- r eucaryotes. , lithotropes ureotelic (e) three major ategory based y come from elegance, A. gy is all about. or ecological	3L
Module 3	Genetics Mendel's laws, Concept of segregation and independent assortin of allele. Gene mapping, Gene interaction, Epistasis. Meiosis a taught as a part of genetics. Emphasis to be give not to the mec division nor the phases but how genetic material passes fro offspring. Concepts of recessiveness and dominance. Concept of phenotype to genes. Discuss about the single gene disorder Discuss the concept of complementation using human genetics Purpose: To convey that "Genetics is to biology what Newton Physical Sciences"	nent. Concept nd Mitosis be hanics of cell om parent to of mapping of s in humans. 's laws are to	4L
Module 4	Biomolecules Molecules of life. In this context discuss monomeric units a structures. Discuss about sugars, starch and cellulose. Amir proteins. Nucleotides and DNA/RNA. Two carbon units and lip Purpose: To convey that all forms of life has the same buildin yet the manifestations are as diverse as one can imagine	nd polymeric no acids and pids. ng blocks and	4L

Module 5	 Enzymes Enzymology: How to monitor enzyme catalyzed reactions. How does an enzyme catalyse reactions. Enzyme classification. Mechanism of enzyme action. Discuss at least two examples. Enzyme kinetics and kinetic parameters. Why should we know these parameters to understand biology? RNA catalysis. Purpose: To convey that without catalysis life would not have existed on earth 	4L
Module 6	 Information Transfer Molecular basis of information transfer. DNA as a genetic material. Hierarchy of DNA structure from single stranded to double helix to nucleosomes. Concept of genetic code. Universality and degeneracy of genetic code. Define gene in terms of complementation and recombination. Purpose: The molecular basis of coding and decoding genetic information is universal 	4L
Module 7	 Macromolecular analysis Proteins- structure and function. Hierarch in protein structure. Primary secondary, tertiary and quaternary structure. Proteins as enzymes, transporters, receptors and structural elements. Purpose: How to analyses biological processes at the reductionistic level 	5L
Module 8	Metabolism Thermodynamics as applied to biological systems. Exothermic and endothermic versus endergonic and exergoinc reactions. Concept of Keq and its relation to standard free energy. Spontaneity. ATP as an energy currency. This should include the breakdown of glucose to CO2 + H2O (Glycolysis and Krebs cycle) and synthesis of glucose from CO2 and H2O (Photosynthesis). Energy yielding and energy consuming reactions. Concept of Energy charge Purpose: The fundamental principles of energy transactions are the same in physical and biological world.	4L
Module 9	Microbiology Concept of single celled organisms. Concept of species and strains. Identification and classification of microorganisms. Microscopy. Ecological aspects of single celled organisms. Sterilization and media compositions. Growth kinetics.	3L

ES-CE301	Fluid Mechanics and Hydraulic Machines	2L + 1T	3 Credits	
Course Outcome	 On successful completion of this course, student sho 1. Define basic terms, values and laws in the arstatics, kinematics and dynamics of fluids, pipe systems; 2. Describe methods of implementing fluid phenomena while analyzing the operational problems; 3. Practically apply tables and diagrams, and associated laws; 4. Calculate and optimize operational parameter 5. Explain the correlation between different operational approach to problem acquired physics and mathematical knowled 	build be able to reas of fluids and hydrauli d mechanics parameters of equations that rs of hydrauli erational parational parational solving basis	o: properties, c design of laws and of hydraulic at define the c problems; meters; sed on the	
Prerequisite	Introduction to Civil Engineering, Physics.			
Module 1	Properties of fluids Fluid – definition, distinction between solid and f and dimensions - Properties of fluids - density, spec specific volume, specific gravity, viscosity, com vapour pressure, capillarity and surface tension.	fluid - Units cific weight, pressibility,	3L	
Module 2	Vapour pressure, capitality and surface tension.Fluid staticsPressure at a point, basic equation for pressure field, pressure variation in a fluid at rest- incompressible fluid, compressible fluid, absolute pressure, gauge pressure; pressure measurements by manometers – general, inclined, inverted, micro-manometer; pressure and forces on submerged planes and curved surfaces, centre of pressure, buoyancy and floatation, Stability of submerged and floating bodies,4L			
Module 3:	Metacentric height.Fluid KinematicsThe velocity field, Eulerian and Lagrangian flow descriptions, concepts of:- one-, two- and three-dimensional flows, steady and unsteady flows, streamlines, streaklines, pathlines; The acceleration field; Control volume and system representation, Continuity Equation, Momentum Equation, Moment-of- Momentum equation, applications to pipe bends; Types of motion: - Translation deformation rotation vorticity			
Module 4:	Fluid Dynamics Application of Newton's Law along a streamline Equation, Kinetic energy head, potential energy pressure energy head, total energy head, Pitot tube of use of Bernoulli Equation, measurement venturimeter, energy line and hydraulic grade line, mouthpieces, discharge over rectangular, trapezoidal notches and weirs.	e, Bernoulli y head and e, Examples of flows - orifices and triangular,	7L	

Module 5:	Dime Buck of ex dime mode	s, correlation s, similitude, d undistorted	3L				
	Flow	Flow through Pipes					
Module 6	Lam flow, head due Conc	y, turbulent ion, loss of a, head loss gh syphon,	7L				
	Pipe	line Systems					
Module 7	Pipes pipes wate	s in series, pipes in paral s, power transmission thro r hammer, pipe networks:	lel, equivalent pipe ugh pipes, flow thro -Hardy Cross meth	s, branching ugh nozzles, od	7L		
	Hyd	raulic Machines					
Module 8	Basics of hydraulic machines, specific speed of pumps and						
	turbines.

ES-CE302	ENGINEERING MECHANICS	3L + 0T	3 Credits
Module 1	Introduction to Engineering Mechanics Force Systems Basic concepts, Particle equilibrium in Rigid Body equilibrium; System of Forces, Coplanar Forces, Components in Space – Resultant- Moment of Forces, Couples and Resultant of Force System, Equipart System of Forces, Free body diagrams, Equations of Equiparant Systems and Spatial Systems; Static Indetermination	2-D & 3-D; Concurrent orces and its uilibrium of uilibrium of acy	6L
Module 2	Friction Types of friction, Limiting friction, Laws of Friction, Sta Dynamic Friction; Motion of Bodies, wedge friction, so differential screw jack;	tic and crew jack &	3L
Module 3	Basic Structural Analysis Equilibrium in three dimensions; Method of Sections; Joints; How to determine if a member is in tension or c Simple Trusses; Zero force members; Beams & types of be & Machines;	Method of compression; eams;Frames	4L
Module 4	Centroid and Centre of Gravity Centroid of simple figures from first principle, centroid of sections; Centre of Gravity and its implications; Area inertia-Definition, Moment of inertia of plane section principles, Theorems of moment of inertia, Moment of standard sections and composite sections; Mass moment circular plate, Cylinder, Cone, Sphere, Hook.	of composite moment of s from first of inertia of nt inertia of	5L
Module 5	Virtual Work and Energy Method Virtual displacements, principle of virtual work for parti system of rigid bodies, degrees of freedom. Active fo systems with friction, mechanical efficiency. Conservative potential energy (elastic and gravitational), energy equilibrium. Applications of energy method for equilibri of equilibrium.	cle and ideal rce diagram, ve forces and equation for um. Stability	4L
Module 6	Review of particle dynamics Rectilinear motion; Plane curvilinear motion (rectangul polar coordinates). 3-D curvilinear motion; Relative and motion; Newton's 2ndlaw (rectangular, path, and polar Work-kinetic energy, power, potential energy. Impulse-m (linear, angular); Impact (Direct and oblique).	ar, path, and l constrained coordinates). nomentum	4L
Module 7	Introduction to Kinetics of Rigid Bodies Basic terms, general principles in dynamics; Types Instantaneous centre of rotation in plane motion and simp D'Alembert's principle and its applications in plane connected bodies; Work energy principle and its application motion of connected bodies; Kinetics of rigid body rotation	of motion, ble problems; motion and tion in plane on;	5L

Module 8	Mechanical Vibrations Basic terminology, free and forced vibrations, resonance and its effects; Degree of freedom; Derivation for frequency and amplitude of free vibrations without damping and single degree of freedom system, simple problems, types of pendulum, use of simple, compound and torsion pendulums;	5L

PC-CE301	SURVEYING & GEOMATICS	2L + 1T	3 Credits	
Course Outcome	 Upon completing the course, the students will be able to: Define and state the scope of surveying and geomatics in civil engineering Understand the basic principles of surveying and geomatics engineering Apply the different methods of surveying and geomatics to measure the features of interest Analyse the traditional and advanced methods of surveying Evaluate the different techniques of surveying and geomatics in solving real world problems. Design and construct solutions for real world problems related to surveying and geomatics. 			
Prerequisite	Knowledge of Mathematics and Physics in Class-XII			
Module 1	Principles of Surveying: Introduction, Principles and classification of surveying; Concept of scales; Survey stations and lines — ranging and bearing; Chain surveying — Concept, Instruments, numerical problems on errors due to incorrect chain; Plane table surveying — Advantages, disadvantages, parts, methods; Elements of simple and compound curves.			
Module 2	Levelling: Levelling — Principles, Precautions and Difficulties; Differential levelling, - Concepts and numerical problems; Contouring. 3L+1			
Module 3	Triangulation and Trilateration:Theodolite survey — Instruments, measurements of horizontal and vertical angles; Triangulation — Network, signals, numerical examples; Baseline measurement — site selection, measuring equipment, numerical problems on baseline corrections; Trigonometric levelling — Axis signal correction.4L+			
Module 4	Advanced Surveying: Principle of Electronic Distance Measurement (EDM); Types of EDM instruments; Distomats; Total Station — Parts, advantages, applications, field procedure and errors; Global Positioning System (GPS) — Concept, applications, segments, location determination, errors; Principle of Differential GPS; Terrestrial laser scanner.			
Module 5	Photogrammetric Surveying: Concept; Classification of photogrammetric surveying — terrestrial, aerial and satellite; scale of a vertical photograph; relief displacement and object height determination; Stereoscopic vision — depth perception, parallactic angle, stereoscopes; Object height determination using parallax; Parallax bar; Flight planning — Concept and numerical problems; Photo mosaic; Orthophotography; Stereoscopic plotting instruments.4L+21			
Module 6	Remote Sensing:Energy sources and radiation principles; Concept of ElectromagneticSpectrum; Energy interactions in the atmosphere and earth surface features;Data acquisition and interpretation; Platforms and sensors — Geostationaryand sun- synchronous orbits, push broom and whiskbroom scanning system,characteristics of IRS, Landsat and Sentinel sensors; Visual imageinterpretation.			

PC-CE301	SUF	RVEYING & GEOMATICS		2L + 1T	3 Credits	
Module 7	Digi Cone class	Digital Image Processing: Concept; Image rectification and restoration; Image enhancement; Image classification; Accuracy assessment and post classification smoothing.			4L+2T	
Module 8	App 3D 1 targe trans	Applications of Geomatics in Civil Engineering:3D mapping; Earthquake and landslides; Runoff modelling; Groundwater targeting; Flood risk assessment; Urban planning; Highway and transportation.3L

PC- CE302	EN	GINEERING GEOLOGY		2L + 1T	3 Credits	
Course Outcome	 On successful completion of this course, student should be able: To study and identify different types natural materials like rocks & minerals and soil. To understand the various natural dynamic processes their influence on the surficial features, natural material and their consequences. To know the physical properties of rocks & minerals. To know the importance of geological maps and language helpful for Civil Engineering projects. 					
Prerequisite	Kno	Knowledge of Geography of 10 th standard				
Module 1	 Introduction: Introduction and scope of Geology and subdivision, Internal structure of the earth, Weathering, erosion and denudations process on earth material and natural agencies, Geological work of wind, river underground water and glaciers. Earthquakes: Basics of earthquake, earthquake history, seismic activity, concept of intensity and magnitude of earthquake, causes of earthquake, influence on civil structures and engineering consideration, seismic zonation, Stratigraphy of INDIA-Introduction. 			8L		
Module 2	Min stud Stud textu mate	Mineralogy and Petrology: Study of physical properties of mineral and study of common rock forming minerals & way of formation of minerals, Study of three types of rocks with reference to their formation, identification, textural and structural features Rocks and natural materials as a construction material.6L				
Module 3	Stru Unce type	Structural Geology: Outcrop, stratification, dip and strike relation, Unconformity, joints their types and genesis Faults and folds with their types and causes, Engineering consideration of joints, folds and faults.				
Module 4	Engineering Geology: Basics of Engineering Geology, Importance of geological studies to Engineers and significance of geological Investigations for civil engineering projects, Geology for Site selection of Dam, Tunnel, Reservoir and Highways.6L				6L	
Module 5	Mass Movement: Classification causes and effect of mass movements, stability of Slopes in unconsolidated materials, Influence of dip and slope Precautionary measures and control of mass movements, Case studies.6L				6L	
Module 6	Hydrogeology: Ground water and occurrence, investigations, quality, artificial recharging.4L			4L

List of the experiments to be conducted along with the theoretical classes (as Tutorial classes)

Experiment No.	Name of Experiment		
1	Fundamental of Geology		
2	Study of Physical Properties of Minerals		
3	Identification of Minerals and Rock sample		
4	Megascopic Study of Rock Forming Minerals (Hand Specimen Study)		
5	Megascopic Study of Igneous Rocks		
6	Megascopic Study of Sedimentary Rocks		
7	Megascopic Study of Metamorphic Rocks		
8	Introduction to Geological Maps for different structural features, Presentation of Beds Along Section and Construction of Geological History		

MC-CE301	ENERGY & ENVIRONMENTAL SCIENCE	2L	0 Credits	
Course Outcome	 On successful completion of this course, student should be able to: Gain knowledge about environment and ecosystem. Learn about natural resource, its importance and environmental impacts of human activities on natural resource. Gain knowledge about the conservation of biodiversity and its importance. Be aware about problems of environmental pollution, its impact on human and ecosystem and control measures. Learn about increase in population growth and its impact on environment 			
Prerequisite	Knowledge of Biology in XII standard			
Module 1	Introduction to Energy Science: Introduction to energy systems and resources; Introduction to Energy, sustainability & the environment; Overview of energy systems, sources, transformations, efficiency, and storage; Fossil fuels (coal, oil, oil-bearing shale and sands, coal gasification) – past, present & future, Remedies & alternatives for fossil fuels – biomass, wind, solar, nuclear, wave, tidal and hydrogen; Sustainability and environmental trade-offs of different energy systems; possibilities for energy storage or regeneration (Ex. Pumped storage hydro power projects, superconductor-based energy storages, high efficiency batteries).		4L	
Module 2	Ecosystems: Concept of an ecosystem; Structure and function of an ecosystem; Producers, consumers and decomposers; Energy flow in the ecosystem; Ecological succession; Food chains, food webs and ecological pyramids; Introduction, types, characteristic features, structure and function of the following ecosystem (a.) Forest ecosystem (b) Grassland ecosystem (c) Desert ecosystem (d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)			
Module 3	Biodiversity and its conservation: Introduction – Definition: genetic, species and ecosystem diversity; Bio- geographical classification of India; Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values; Biodiversity at global, National and local levels; India as a mega-diversity nation; Hot-sports of biodiversity; Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts; Endangered and endemic species of India; Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.		3L	
Module 4	Environmental Pollution: Definition, Cause, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards; Solid waste Management: Causes, effects and control measures of urban and industrial wastes; Role of an individual in prevention of pollution; Pollution case studies; Disaster management: floods, earthquake, cyclone and landslides.		3L	

MC-CE301	ENI	ERGY & ENVIRONMENT	AL SCIENCE	2 L	0 Credits
Module 5	Social Issues and the Environment: From Unsustainable to Sustainable development; Urban problems related to energy; Water conservation, rain water harvesting, watershed management; Resettlement and rehabilitation of people; its problems and concerns. Case Studies Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case Studies Wasteland reclamation; Consumerism and waste products; Environment Protection Act; Air (Prevention and Control of Pollution) Act; Water (Prevention and control of Pollution) Act; Wildlife Protection Act; Forest Conservation Act; Issues involved in enforcement of environmental legislation; Public awareness.				
Module 6	Field work • Visit to a local area to document environmental assets river /forest/grassland/hill/mountain • Visit to a local polluted site-Urban/Rural/Industrial/Agricultural • Study of common plants, insects, birds. • Study of simple ecosystems-pond, river, hill slopes, etc.			4T

ES-CE391	Fluid Mechanics and Hydraulic Machines Laboratory	2P	1 Credits	
Course Outcome	 On completion of the course, the students will be able to: Calibrate the notch and orifice meter. Evaluate the performance of pump and turbine. Determine the various hydraulic coefficients. Determine the minor losses through pipes. Measure the water surface profile due to formation of hydraulic jump. Measure the water surface profile for flow over Broad crested weir. 			
Prerequisite	Introduction to Fluid Mechanics & Hydraulic Machines [ES-CE301]			
Experiment 1	Calibration of Notches			
Experiment 2	Calibration of Orifice meter			
Experiment 3	Determination of Hydraulic Coefficient of an Orifice			
Experiment 4	Performance Test on Centrifugal Pump			
Experiment 5	Performance Test on Reciprocating Pump			
Experiment 6	Determination of Minor Losses in Pipes due to Sudden Enlargement and SuddenContraction			
Experiment 7	Velocity measurement through Pitot Tube			
Experiment 8	Measurement of water surface profile for flow over Broad crested weir			
Experiment 9	Measurement of water surface profile for a hydraulic jump			
Experiment 10	Measurement of coefficient of friction in pipe flo	ow		
Experiment 11	Performance Test on Pelton Wheel Turbine			

ES-CE392	COMPUTER-AIDED CIVIL ENGINEERING DRAWING	3P	1.5 Credits
Module 1	INTRODUCTION Introduction to concept of drawings, Interpretation of typical drawings, Planning drawings to show information concisely and comprehensively; optimal layout of drawings and Scales; Introduction to computer aided drawing, co-ordinate systems, reference planes. Commands: Initial settings, Drawing aids, Drawing basic entities, Modify commands, Layers, Text and Dimensioning, Blocks. Drawing presentation norms and standards.		
Module 2	SYMBOLS AND SIGN CONVENTIONS Materials, Architectural, Structural, Electrical and Plumbing syndrawings and structural steel fabrication and connections drawi welding symbols; dimensioning standards	nbols. Rebar ng symbols,	2 L
Module 3	MASONRY BONDS English Bond and Flemish Bond – Corner wall and Cross walls -One brick wall and one and half brick wall.		
Module 4	BUILDING DRAWING Terms, Elements of planning building drawing, Methods of making line drawing and detailed drawing. Site plan, floor plan, elevation and section drawing of small residential buildings. Foundation plan. Roof drainage plans. Depicting joinery, standard fittings & fixtures, finishes. Use of Notes to improve clarity.		
Module 5	PICTORIAL VIEW Principles of isometrics and perspective drawing. Perspective view of building. Fundamentals of Building Information Modelling (BIM).		
Drawings			
1	Buildings with load bearing walls including details of doors and with	ndows.	6P
2	Taking standard drawings of a typical two storeyed building including all MEP, joinery, rebars, finishing and other details and writing out a description of the Facility in about 500-700 words.		
3	RCC framed structures		6P
4	Reinforcement drawings for typical slabs, beams, columns and spre	ad footings	6P
5	Industrial buildings - North light roof structures - Trusses		4 P
6	Perspective view of one and two storey buildings		4 P

PC-CE391	SURVEYING & GEOMATICS LABORATORY	3P	1.5 Credits			
Course Outcome	 Upon completion of the course, the students will be able to: State the interdependency and advancement of different surveying methods Comprehend the working principles of different surveying and geomatics instruments and experiments Execute the different methods of surveying and geomatics to measure the features of interest Examine the results obtained from the surveying and geomatics experiments Critically appraise the different techniques of surveying and geomatics in measuring and assessing the features of interest Design and construct solutions for real world problems related to surveying and geomatics. 					
Prerequisite	Surveying & Geomatics [PC-CE301]	Surveying & Geomatics [PC-CE301]				
Experiment 1	Traverse survey by Prismatic Compass: Procedure; Computation and checks on closed traverse; Preparation of field book; Plotting the traverse; Sources of errors.					
Experiment 2	Theodolite Survey: Closed traverse by transit theodolite, Preparation of field book					
Experiment 3	Differential Levelling using Dumpy level: Collimation and Rise and Fall methods, Field book preparation					
Experiment 4	Total Station Survey: Traversing and Levelling					
Experiment 5	Visual Image Interpretation					
Experiment 6	Satellite Image Pre-processing					
Experiment 7	Digital Image Classification and Accuracy Assessmen	t				
Experiment 8	Stereoscopic fusion of aerial photographs using mirror	stereoscope	9			

HU-CE401	VALUE & ETHICS IN PROFESSION	2L + 0T	2 Credits
Course Outcome	 After going through this course, the students will be able to: 1. Understand basic purpose of profession, professional ethics and various moral and social issues. 2. Awareness of professional rights and responsibilities of an Engineer, safety and risk benefit analysis of an Engineer 3. Acquiring knowledge of various roles of Engineer in applying ethical principles at various professional levels 4. Professional Ethical values and contemporary issues 5. Excelling in competitive and challenging environment to contribute to industrial growth. 		
Prerequisite	Science, Technology and Engineering as knowledge an Activities.	nd as Social a	nd Professiona
Module 1	Effects of Technological Growth: Rapid Technological depletion of resources, Reports of the Club of Rome. I sustainable development, Energy Crisis: Renewable E Environmental degradation and pollution. Eco-friend Environmental Regulations, Environmental Ethics.	gical growth Limits of gro nergy Resour ly Technolog	and wth: rces, 4L gies.
Module 2	Appropriate Technology Movement of Schumacher ; later developments Technology and developing notions. Problems of Technology transfer, Technology assessment impact analysis. Human Operator in Engineering projects and industries. Problems of man, machine, interaction, Impact of assembly line and automation. Human cantered Technology.		
Module 3	Ethics of Profession: Engineering profession: Ethical issues in Engineering practice, Conflicts between business demands and professional ideals. Social and ethical responsibilities of Technologists. Codes of professional ethics. Whistle blowing and beyond, Case studies.		
Module 4	Profession and Human Values: Values Crisis in con Nature of values: Value Spectrum of a good life Psy Integrated personality; mental health	temporary so chological va	alues: 4L
Module 5	Societal values: The modern search for a good soc democracy, secularism, rule of law, values in Indian Co	iety, justice, onstitution.	2 L
Module 6	Aesthetic values: Perception and enjoyment of beauty, Moral and ethical values: Nature of moral judgements ethics of virtue; ethics of duty; ethics of responsibility	simplicity, c	larity thics; 4L

CE(ES)401	SOLID MECHANICS	2L + 1T	3 Credits	
Course Outcome Prerequisite	 After going through this course, the students will be able to: 1. To identify the equilibrium conditions and elastic properties of axially loaded bars through stress-strain and force-displacement curves. 2. To identify the principal plane and principal stresses through Mohr circle. 3. To calculate the hoop and meridional stresses in thin cylinders and spherical shells. 4. To identify different degrees of freedoms for support conditions like hinge, roller and fixedconstraints. 5. To calculate the bending moment, shear force and deflection of beams for uniformly distributed, concentrated, linearly varying and external concentrated moment. 6. To calculate the member forces in a plane truss using Method of Joint and Method of Section. 7. To identify torsional moment and twist on a circular shaft and calculate the shear stress. 8. To know the concepts of strain energy due to axial load, bending and shear. 9. To calculate the buckling load of columns using Euler's theory for different support constraints 			
Prerequisite	Review of Basic Concepts of Stress	and Strain:		
Module 1	Normal stress, Shear stress, Bearing stress Shearing strain; Hooke's law; Poisson's strain diagram of ductile and brittle m limit; Ultimate stress; Yielding; Modula Factor of safety, Beam Statics: Supp concepts of redundancy, axial force, s bending moment diagrams for concentre distributed, linearly varying load, concern insimply supported beams, cantilever a beams	s, Normal strain, 's ratio; Stress- aterials; Elastic us of elasticity; port reactions, shear force and rated, uniformly strated moments nd overhanging	6L	
Module 2	Symmetric Beam Bending : Basic kinem moment of inertia, elastic flexure fo application, Bending and shear stress for shear centre	atic assumption, rmulae and its regular sections,	3L	
Module 3	Deflection of statically determin Fundamental concepts: Elastic curve, more relationship, governing differential equation conditions: Direct integration solution	nate beams : oment Curvature tion, boundary	4L	
Module 4	Analysis of determinate plane trust of redundancy, Analysis by method of method of sections	ses : Concepts f joints,	4 L	

	Two	Dimensional Stress Prob	olems: Principal stress	ses,	
Module 5	maxi	ses, 3L			
	const	truction of Mohr's circle			
	Intro	oduction to thin cylindri	ical & spherical she	lls:	
Module 6	Hoop	p stress and meridional - s	stress and volumetric	3L	
	chan	ges			
	Tors	ion: Pure torsion, torsion of	of circular solid shaft a	and	
Module 7	hollo	w shafts, torsional equation	, torsional rigidity, clo	sed 4L	
	coil l	nelical; springs			
	Colu	mns: Fundamentals, cr	riteria for stability	in	
	equil	ibrium, column buckling	theory, Euler's load	for	
Module 8	colui	nns with different end condi	tions, limitations of Eu	ler's 3L	
	theor	ry – problems, eccentric lo	ad and secant

PC-CE401	CONCRETE TECHNOLGY & CONSTRUCTION MATERIALS	3L + 0T	3 Credits
Course Outcome Prerequisite	 After going through this course, the students will be a 1. Test all the required properties of concrete and concode. 2. Compute the properties construction materials and hardened state. 3. Design the concrete mix as per latest IS code method. 4. Ensure quality control while testing/ sampling. 5. Design the special type of concrete for specific app 6. Use the admixture as per requirement. Undergraduate level Engineering Chemistry Cement: Manufacturing of cement, Oxides composition 	able to: struction ma l concrete at ods. lication purp	terials as per IS fresh and oses.
Module 1	the calculation of compounds, Heat of hydration, Types RPC. Low heat cement, PPC, PSC, Sulphate resistin Alumina cement, Expansive cement, White cement; fineness, consistency, initial setting time & final setting test, strength test, specific gravity of cement, storage of Lime: Impurities in limestone, Classification, Slakin, Hardening, Testing, Storage, Handling	of cement. I ng cement, I Test on cen g time, sound cement. g and hydra	DPC, High hent- lness 4L tion,
Module 2	 Aggregates: Classification, Grading, alkali-aggregates: aggregates, physical proper aggregates- fineness modulus, bulking, specific gravity flakiness & elongation index. Quality of Water for mixuse of sea water for mixing concrete. Mortars: Classification, Uses, Characteristics of Ingredients. Cement mortar, Lime mortar, Lime cemer mortars 	regate reac erties, testin y, sieve anal xing and curf f good mo at mortar, spe	tion, g of ysis, ing - ortar, ecial
Module 3	 Properties of fresh concrete: Workability, factors affers segregation and bleeding, tests on workability- slump factor test, vee-bee test, and flow table test. Properties of Hardened concrete: Tensile & complexity of the strength, stress-strain characteristics, module poisson's ratio, Creep, shrinkage, permeability of cracking of concrete. Strength of concrete: curing methods, water-cement ratio, maturity of concrete, 	ecting workal o test, compa pressive stread lus of elast concrete, m nt ratio. gel-	oility, acting ength, ticity, 6L micro space
Module 4	 Admixtures: types, uses, super plasticizers, plasticizers, admixtures. Mix Design – Objective, factors influencing mix propied design by I.S. 10262-2019. (with & without admixture) Special Concrete – Ferro cement - Fibre reinforced concrete - Sulphur Concrete - Self compacting control of the second seco	ers, and Bor ortion - Mix oncrete - Pol crete. Ready	nding 6L ymer mix

	concrete, Batching plant.		
	Non-destructive test: Rebound hammer and Ultra-sonic pulse velocity		
	testing methods. Quality control - Sampling and testing, Acceptance		
	criteria.		
	Bricks: Classification, Characteristics of good bricks, ingredients of good		
	brick earth, Harmful substance in brick Earth, Different forms of bricks,		
	Testing of bricks as per BIS. Defects of bricks. Brick masonry:		
Madula 5	Definitions, Rules for bonding, Type of bonds – stretcher bond, Header	71	
Mouule 5	bond, English bond, Flemish Bond, Comparison of English Bond and	/L	
	Flemish Bond (one and one and half brick thick wall)		
	Foundations: Function of Foundations, Essential requirement of good		
	foundation, Different types of shallow and deep Foundations		
	Wood and Wood Products: Wall, Doors and Windows: Paints, Enamels		
Module 6	and Varnishes: Stairs: Flooring: Plastering and Pointing: Roofs:	4L

	8. Building Materials by S. K. Duggal		
	9. Building Materials by P.C. Varghese, PHI		

PC-CE402	ENGINEERING HYDROLOGY 3L + 0T	3 Credits		
	On completion of the course, the students will be able t	0:		
	1. Study the source, occurrence, movement and distribution of water			
	which is a prime resource for development of a natio	n.		
C	2. Learn about the functioning of reservoirs and e	stimation of		
Course	storage capacities.			
Outcome	3. Learn about flood hazards, estimation of design flood	ls for various		
	structures and methods of estimating effects of pass	ageof floods		
	through rivers and reservoirs.	-		
	4. Know the basic principles of measurement of flow in	rivers.		
D	ES-CE301, Fluid Mechanics, Chemistry BS-CH101,	Physics BS-		
Prerequisite	CH201.			
Module 1	Hydrology: Hydrologic Cycle, Global Water Budget,	11.		
mouule 1	India's Water Budget.	112		
	Catchment: Definition & Descriptions, Various Types			
Module 2	of Catchment, Factors Characterizing a Catchment,	2 L		
	Delineation of Catchment Boundary.			
	Measurement of Precipitation: Precipitation,			
Module 3.	Description and Functioning of Various Types of Rain	21		
Module 5:	gauges, Rain gauge Network- Codal Provisions,	212		
	Optimum Number of Raingauge Stations.			
	Processing of Rainfall Data: Normal Rainfall,			
	Estimation of Missing Rainfall Data, Test for			
Module 4:	Consistency of Record; Mass Curve of Rainfall,	4I		
	Hyetograph, Point Rainfall; Mean Precipitation overan			
	Area– Arithmetic Mean, Thiessen Polygon and			
	Isonyetal Method.			
	D reases From Precipitation: Evaporation – Evaporation			
	Frocess, Factors affecting Evaporation, Measurement of			
	Evaporation Description and Functioning of Fail			
	AET DET Monouroment of ET Estimation of ET			
Module 5:	Right Restriction Process Factors	6L		
	Affecting Infiltration Infiltration Rate and			
	Infiltration Canacity Measurement of Infiltration			
	Infiltration Equations			
	Infiltration Indices.			
	Streamflow Measurement: Importance, Direct and			
	Indirect Methods, Measurement of Stage- Various			
	Gauges and Recorders, Measurement of Velocity-			
	Current Meters, their Functioning and Calibration;			
	Velocity Distribution, Floats; Streamflow			
	Computation- Area-Velocity Method, Moving Boat			
Module 6	Method, Dilution Technique, Electromagnetic Method,	12L		
	Ultrasonic Method; Indirect Methods– Flow Measuring			
	Structures, Slope Area Method; Stage- Discharge			
	Relation, Permanent Control, Stage for ZeroDischarge,			
	Shifting Control– Backwater Effect,			
	Unsteady Flow Effect, Extension of the Rating			
	Curve.			

Module 7	Runoff: Description of the Process, Components of Runoff, Factors Affecting Runoff, Characteristics of Streams, Rainfall Runoff Relationships.				2L
Module 8	Hyd Rain Appl Distr Dura synth hydr	4L			
Module 9	Floods: Concept of flood as a natural hazard; Estimation of flood discharge in a river – rational method, empirical formulae, unit hydrograph method; floodfrequency studies – return period.			2L	
Module 10	Flood Routing: Concept of flood routing in channels and through a reservoir, basic routing equations; reservoir routing – Modified Pul's method; channel routing – Muskingum method.			5L

PC-CE403	SOIL MECHANICS I	3L + 0T	3 Credits
Course Outcome	 After going through this course, the students will be able Classify soil as per grain size distribution curve properties of soil. Apply the concept of total stress, effective stress solving geotechnical problems. Assess the permeability of different types of soil Estimate the seepage loss, factor of safety again net related to any hydraulic structure. Determine vertical stress on a horizontal plane w different types of loading on the ground surfactor stressed zone or isobar below a loaded area. 	e to: re and unders and pore wa and solve flo ast piping fai ithin a soil m ace and also	stand the index ter pressure for ow problems. lure using flow ass subjected to the maximum
Prerequisite	Undergraduate level knowledge of Engineering Mechan	ics.	
Module 1	Origin & formation of Soil: Principal types of soil, Ty size and shape of soil particles, Properties of very f structure of clay.	pical Indian s ine soil fract	Soil, ^{ion,} 4L
Module 2	Soil Aggregate: Texture, Structure and consistency, soil as a three phasesystem, Weight- Volume Relationship, Measurement of PhysicalProperties of Soil: In-situ Density, Moisture Content, Specific Gravity,and Relative Density.		
Module 3	Particle Size Distribution: By Sieving, Sedimentation	Analysis.	4 L
Module 4	Index Properties of Soil: Consistency of undisturbed s soil, Attarberg's Limits- Determination of Index Prop Casagrande's Apparatus, Cone Penetrometer, Soil Indice of index properties.	oil and remote perties of So es, and impor	ılded il by tance 4L
Module 5	Soil Classification: As per Unified Classification System Recommendation, AASHTO Classification, Field Identi	n, As per IS fication of So	Code bil 4L
Module 6	Soil Moisture: Permeability, Capillarity in Soil Determination of Coefficient of Permeability of Soil in Field, Permeability for Stratified Deposits.	, Darcy's n Laboratory	Law, & in 5L
Module 7	Two Dimensional Flow Through Soil: Laplace's Equ Flow Through Earthen Dam, Estimation of Seepage, Design of Fillers.	ations, Flow Seepage pres	nets, sure, 5L
Module 8	Concept of Effective Stress: Definition of Effective stress, Estimation of Effective stress, Critical Hydrauli Sand Condition.	Stress and ne c Gradient, (eutral Quick 3L
Module 9	Vertical Stress in soil beneath a loaded area: Boust stress distribution due to point load, line load, strip load area, circular, rectangular, Pressure Bulbs, Influence	nesq's Equat , uniformly lo chart for ve	tions, baded 8L rtical

	pressure due to Newmark, 1942, Westergaad's equation, Simplified approach to determine load distribution	
Module 10	Introduction to Rocks: Rock Mechanics, Rock Materials, Rock Formations, Types of rock, Geological structures and discontinuities, weathering of rocks and soil formation.	8L

MC-CE401	ESSENCE OF TRADITIONAL KNOWLEDGE	2L + 0T	0 Credits
Course Outcome	 After going through this course, the students will be a 1. Understand the concept of Traditional knowledge a 2. Know the need and importance of protecting traditi 3. Know the various enactments related to the protect knowledge. 4. Understand the concepts of Intellectual proper knowledge. 	able to: and its import onal knowlection of tradition ty to protect	ance lge. onal the traditional
Module 1	Introduction to traditional knowledge: Define tradit nature and characteristics, scope and importance, kir knowledge, the physical and social contexts in v knowledge develop, the historical impact of social char knowledge systems. Indigenous Knowledge (IK), traditional knowledge vis-a-vis indigenous knowledge knowledge Vs. western knowledge, traditional knowledge	ional knowle nds of traditi which traditi nge on traditi , characteris edge, traditi edge vis-à-vis	dge, onal onal tics, onal
Module 2	Protection of traditional knowledge (TK): the new traditional knowledge Significance of TK Protection, global economy, Role of Government to harness TK.	ed for protect, value of TI	ting ζ in 4L
Module 3	Legal frame work and TK: A: The Scheduled Traditional Forest Dwellers (Recognition of Forest R Plant Varieties Protection and Farmer's Rights Act, 20 B: The Biological Diversity Act 2002 and Rules 2004 traditional knowledge bill, 2016. Geographical indicato	Tribes and (Rights) Act, 2 001 (PPVFR , the protection ors act 2003.	Other 2006, Act); 5L on of
Module 4	Traditional knowledge and intellectual proper traditional knowledge protection, Legal concepts for traditional knowledge, Certain non IPR mechanism knowledge protection, Patents and traditional knowle increase protection of traditional knowledge, global leg increasing protection of Indian Traditional Knowledge.	rty: System the protections of traditions of traditions dge, Strateging al FORA for	s of on of ional es to 5L
Module 5	Traditional knowledge in different sectors: Tradition engineering, Traditional medicine system, TK and bion agriculture, Traditional societies depend on it for their for needs, Importance of conservation and sustainable environment, Management of biodiversity, Food securi of the country and protection of TK.	nal knowledg technology, 7 bod and healt developmenty	e and TK in hcare nt of 5L

ES-CE491	SOLID MECHANICS LABORATORY	2P	1 Credits	
	After going through this course, the students wi	ll be abl	e to:	
	1. Demonstrate the method and findings of tensio	n and co	mpression	
	tests on ductile andbrittle materials.			
	2. Explain the method of bending tests on mild steel	l beam ar	nd concrete	
	beam.			
	3. Demonstrate the method and findings of To	rsion tes	st on mild	
Course	steel circular bar andconcrete beam.			
Outcome	4. Illustrate the concept of hardness and explain	the proc	edure and	
	findings of Brinneland Rockwell tests.			
	5. Demonstrate the concept and procedure of calc	ulation of	of spring	
	constant and elaborateits use in Civil Engineer	ing.		
	6. Demonstrate the method and findings of Izod a	and Cha	rpy impact	
	tests.			
	7. Understand the concepts of fatigue test.			
Prerequisite	Solid Mechanics [ES-CE401]			
Experiment 1	Tension test on Structural Materials: Mild Steel and Tor steel (HYSD			
	bars)			
Experiment 2	Compression Test on Structural Materials: Timber,	bricks a	nd concrete	
Experiment 2	cubes			
Experiment 3	Bending Test on Mild Steel			
Experiment 4	Torsion Test on Mild Steel Circular Bar			
Experiment 5	Hardness Tests on Ferrous and Non-Ferrous Metals: Brinnel and			
Experiment 5	Rockwell Tests			
Experiment 6	Test on closely coiled helical spring			
Experiment 7	Impact Test: Izod and Charpy			
Experiment 8	Demonstration of Fatigue Test			

PC-CE491	CONCRETE TECHNOLOGY LABORATORY	2P	1 Credits		
Course Outcome	 Upon completion of the course, the students will be able to: Demonstrate the method and findings of tension and compression tests on concrete. Understand the concepts of different test on hardened concrete. Find out the mix proportion of high grade of concrete. Measure the workability of concrete mix. Know about the quality of concrete. 				
Prerequisite	Concrete Technology & Construction materials [PC-CE401]				
Experiment 1	Tests on Fresh Concrete: Workability : Slump, Vee-Bee, Compaction factor tests				
Experiment 2	Hardened Concrete: Compressive strength on Cubes, Split tensile strength, Static modulus of elasticity, Flexure tests, Non-destructive testing (Rebound hammer & Ultrasonic pulse velocity)				
Experiment 3	Mix Design of Concrete.				

PC-CE492	CONSTRUCTION MATERIAL LABORATORY	2P	1 Credits	
Course Outcome	 Upon completion of the course, the students will be able to: 1. Calculate the specific gravity of concrete ingredients. 2. Understand the different properties of cement. 3. Know about the quality of concrete. 			
Prerequisite	Concrete Technology & Construction materials [PC-CE401]			
Test on Fine aggregates	Bulking, Specific gravity, Bulk Density, Percentage voids, Fineness Modulus. Grading curve.			
Test on Coarse aggregates	Specific gravity, Bulk Density, Percentage voids, Fineness Modulus. Grading curve.			
Test on Cement	Normal consistency, fineness, Initial setting and final setting time of cement. Specific gravity, soundness and Compressive strength of Cement.			
Tests on bricks and tiles (Roofing and Flooring)	Water absorption, breaking loads.

JALPAIGNRAGOVERNDIENT ANIGINE PRINKINSTILLECH (NAAC ACOREDRIEDE AUOONOMONG INSTRINCTE) DEPARTMENT OF CIVIL ENGINEERING

PC-CE493	SOIL MECHANICS- I LABORATORY	2P	1 Credits		
Course Outcome	 After going through this course, the students will be able to: Identify different types of soil by visual inspection. Determine natural moisture content and specific gravity of various types of soil. Estimate in-situ density by core cutter method and sand replacement method. Analyze grain size distribution and Atterberg limits for soil. Perform laboratory tests to determine permeability and compaction characteristics of soil. 				
Prerequisite	Soil Mechanics – I [PC-CE403]				
Experiment 1	Field identification of different type of soil as per Indian standards [collection of field samples and identification without laboratory testing], determination of natural moisture content.				
Experiment 2	Determination of specific gravity of i) Cohesion less ii) cohesive soil				
Experiment 3	Determination of In-situ density by core cutter Method				
Experiment 4	Determination In-situ density by sand replacement method				
Experiment 5	Grain size distribution of cohesion less soil by sieving.				
Experiment 6	Grain size distribution of fine grained soil by hydromete	r analysi	S		
Experiment 7	Determination of Atterberg's limit (liquid limit, plastic li	imit & sł	nrinkage limit)		
Experiment 8	Determination of Atterberg's limit (liquid limit, plastic li	imit & sh	nrinkage limit)		
Experiment 9	Determination of co-efficient of permeability by variabl grained soil).	e head p	arameter (fine

PC-CE501	DESIGN OF RCC STRUCTURES 3L + 0T	3 Credits		
Course Outcome	 After going through this course, the students will be able to: 1. Understand material properties and design methodologies for reinforced concrete structures. 2. Assess different type of loads and prepare layout for reinforced concrete structures. 3. Identify and apply the applicable industrial design codes relevate to the design of reinforced concrete members. 4. Analyze and design various structural elements of reinforced concrete building like beam, slab, column, footing, and staircase. 5. Assessment of serviceability criteria for reinforced concrete beam and slab. 6. Prepare structural drawings and detailing and produce design calculations and drawing in appropriate professional format. 			
Prerequisite	Solid Mechanics [ES-CE401], Concrete Technology & Co Materials [PC-CE401].	nstruction		
Module 1:	Introduction: Principles of design of reinforced concrete members - Working stress and Limit State method of design	l 1L		
Module 2:	Working stress method of design: Basic concepts and IS code provisions (IS: 456 2000)for design against bending moment and shear forces - Balanced, under reinforced and over-reinforced beam/ slab sections; design of singly and doubly reinforced sections	3 3 3 1 3 1		
Module 3:	Limit state method of design: Basic concepts and IS code provisions (IS: 456 2000) for design against bending moment and shear forces; concepts of bond stress and development length; Use of 'design aids for reinforced concrete' (SP:16).	6L		
Module 4:	Beam Design by LSM: Analysis, design and detailing of singly reinforced rectangular, 'T', 'L' and doubly reinforced beam sections by limit state method.	5 4L		
Module 5:	Slab Design by LSM : Design and detailing of one way and two-way slab panels as per IS code provisions	- 2L		
Module 6:	Continuous slab and beam design by LSM: Design and detailing of continuous beams and slabs as per IS code provisions	2L		
Module 7:	Design of Staircases by LSM : Types; Design and detailing of reinforced concrete dog-legged staircase	¹ 3L		
Module 8	Design of Columns by LSM : Design and detailing or reinforced concrete short columns of rectangular and circular cross-sections under axial load. Design of short columns subjected to axial load with moments (uniaxia and biaxial bending) – using SP 16.	f 1 t 4L		
Module 9	Design of Foundation by LSM: Design and detailing of reinforced concrete isolated square and rectangula isolated and combined footing for columns as per IS code provisions by limit state method Design and	6L		

	de	tailing of Pile foundation as per IS code provisions.
	1	IS: 456 - 2000
IS Codes	2	IS 875 – I (1987), II (1987), -III (2015), -IV(1987), V (1987)
	3	SP: 16 Design Aid to IS 456

CE(PC)502	STI	RUCTURAL ANALYS	IS – I	3L + 0T	3 Credits	
	Aft	er going through this cou	urse, the students	will be abl	e to:	
	1.	Distinguish between stab	ole and unstable a	nd staticall	У	
		determinate and indeterm	inate structures.			
	2.	Apply equations of equil	ibrium to structur	es and con	npute	
		the reactions.				
Course	3.	Calculate the internal fo	orces in cable and	arch type	;	
Outcome		structures.				
	4.	Evaluate and draw the in	fluence lines for r	eactions, sl	hears	
	and bending moments in beams due to moving loads.					
	5.	5. Use approximate methods for analysis of statically				
		indeterminate structures.				
	6.	Calculate the deflections	of truss structures	and beams.		
Prerequisite	Intr	oduction to Solid Mechan	ics [ES-CE401], E	ngineering	mechanics	
	Bas	ics of Structural Anal	ysis: Concept of	static and		
	kine	ematic indeterminacy, D	Determination of	degree of		
	inde	eterminacy for different t	types of structures	s. Theorem		
Module 1	of n	ninimum potential energy	, law of conservat	ion energy,	4 L	
	principle of virtual work, the first and second theorems of					
	Castigilano, Betti's law, Clark Maxwell's theorem of					
	reci	reciprocal deflection				
Module 2	Ana	alysis of Determinate	Structures: Porta	al Frames,	4I	
	Three hinged arches, Cables					
	Deflection of Determinate Structures : Energy					
Module 3	met	hods. Unit Load method	for beams, Defle	ction of	4 L	
	trusses and Simple Portal Frames.					
	Infl	uence Line Diagram:	Statically det	erminate		
Module 4	beams and trusses under series of concentrated and			6L		
	uniformly distributed rolling loads, criteria for			-		
	maximum and absolute maximum moments and shear.					
	Ana	lysis of Statically Indeter	minate Beams: T	neorem of		
	three moments, Energy methods, Force method (Method of					
Module 5	consistent deformation) [For analysis of propped cantilever,			8L		
	fixed beams and continuous beams (maximum two degree					
	of indeterminacy) for simple loading case],					
	Analysis of two hinged arch.					
Module 6 Influence Line Diagram for Indeterminat			minate	4 L

PC-CE504	Environmental Engineering II	3L + 0T	3 credits		
Course outcome	 Define the basic concepts and terminologies of waste water engineering and solid waste management. Describe different home plumbing systems for water supply and wastewater disposal Apply the methods of quantifying sanitary sewage and storm sewage Identify and explain the main physical, chemical and biological characteristics of wastewater and compare between different wastewater samples. Understand and develop treatment plant layouts. Explain and use the main design criteria for wastewater treatment processes and the disposal methods. Ability to perform basic design of the different unit operations and processes that are involved in wastewater treatment. Acquire the knowledge of characteristics and various treatment technologies of solid waste and its management systems. 				
Prerequisite	XII level knowledge of Physics, Chemist Environmental Science; Undergraduate level Mechanics, Fluid Mechanics and Hydraulics;	try, Mathematics, knowledge of Eng Environmental Eng	Biology and ineering gineering – I		
Module 1	Sewage and DrainageDefinition of Common Terms: Sewage or Sanitary Sewage,Drainage or Storm Sewage, Sullage, Black Water, Grey WaterSewerage Systems: Separate system, Combined System,Partially Separate System; applicability, advantages anddisadvantages				
Module 2	Sewage and Drainage Quantity Quantity estimation for sanitary sewage; Qu for storm sewage	4L			
Module 3	Conveyance of Sewage Sewers Shapes; Design parameters; Operation and sewers; Sewer appurtenances Hydraulic Desi Partial flow diagrams and Nomograms	maintenance of gn of Sewers:	4L		
Module 4	Wastewater CharacteristicsPhysical, chemical and biological characteristics of municipaland domestic sewage; Effluent discharge standards				
Module 5	Wastewater TreatmentPrimary, secondary and tertiary treatment of wastewater; aerobic an anaerobic treatment options Primary and Secondary Treatment of Domestic Wastewater: Typical Flow Chart of STP; Screen and Bar Racks; Grit Chamber; Primary and Secondary Sedimentation Tank; Activated Sludge Process; Trickling Filter12L				
Module 6	Sludge Handling and Disposal Sludge Thickening; Sludge Digestion; Slud Oxidation pond, oxidation ditch, aerated lag Imhoff tank, Disposal by dilution, irrigation an sanitation.	dge Drying Bed, goon, septic tank, ad farming, stream	4L		

	Building Plumbing

PC-CE591	RCC STRUCTURES DESIGN LAB	2P	1 credits		
Course outcome	PC-CES91RCC STRUCTORES DESIGN LAB2PTcreditsAfter going through this course, the students will be able to:1.Understand material properties and design methodologies for reinforced concrete structures.2.Assess different type of loads and prepare layout for reinforced concrete structures.3.3.Identify and apply the applicable industrial design codes relevant to the design of reinforcedconcrete members.4.Analyze and design various structural elements of reinforced concrete building like slab, beam, column, footing, and staircase.5.Assessment of serviceability criteria for reinforced concrete beam and slab.6.Prepare structural and detailing drawings and produce design				
Prerequisite	Design of RC Structures [PC-CE501]				
	Design of a small RCC framed building using Limit State method of design including preparation of necessary working drawing and report in accordance with PC-CE501				

PC-CE592	SOIL MECHANICS- II LAB	2P	1 credits
Course outcome	 On completion of the course the students will be able to: 1. Perform laboratory tests to determine compaction characteristics of soil. 2. Determine shear strength parameters of soil by unconfined compression test and vane shear test. 3. Determine shear strength parameters of soil by direct shear test. 4. Perform triaxial test to determine shear strength parameters of soil. 5. Determine California Bearing Ratio (CBR) of soil. 6. Determine SPT and Field Vane Shear test 7. Prepare technical laboratory report 		
Prerequisite	Soil Mechanics- I [PC-CE403] & Soil Mechanics	- II [PC-CE5	03]
Experiment 1	Determination of compaction characteristics of soil by is light compaction.		
Experiment 2	Determination of compressibility characteristics of	of soil by cons	solidation test
Experiment 3	Determination of unconfined compressive strength of soil		
Experiment 4	Determination of Shear parameter of soil by Direct shear test		
Experiment 5	Determination of un-drained shear strength of soi	l by venue sh	ear test.
Experiment 6	Determination of shear parameter of soil by Tri-a	xial test	
Experiment 7	Determination of CBR of a soil specimen (u recommendation.	in-soaked) as	s per IS code
Experiment 8	Determination of CBR of Soil specimen (Soaked) as per IS code recommendation.		
Experiment 9	Standard Penetration Test.		
Experiment 10	Field vane shear test.

PC-CE594	TRANSPORTATION ENGINEERING LAB	2P	1 credits
Course outcome	 On completion of the course the students will be able to: 1. Understand the properties of materials used for construction of highways and perform the relative tests. 2. Design BC and SDBC Mix by Marshal Method of mix design. 3. Acquire knowledge about Benkelman beam Test. 4. Prepare formal reports. 		
Prerequisite	Knowledge of Transportation Engineering		
Experiment 1	Shape test of aggregate		
Experiment 2	Crushing Strength Test of aggregate		
Experiment 3	Impact test of aggregate		
Experiment 4	Los Angeles Abrasion test of aggregate		
Experiment 5	Specific Gravity and Water Absorption test of agg	gregate	
Experiment 6	Specific Gravity test of bitumen		
Experiment 7	Penetration test		
Experiment 8	Static or Kinematic viscosity		
Experiment 9	Softening point test		
Experiment 10	Flash and Fire Point test		
Experiment 11	Ductility test		
Experiment 12	CBR value of sub-grade (Soaked and un-soaked)		
Experiment 13	Marshall Stability test		
Demonstration	Demonstration on Stripping value and Loss on Benkelman Beam and Bump Integrator test.	heating tes	ts of bitumen,

PC-CE601	CONSTRUCTION ENGINEERING & MANAGEMENT	3L + 0T	3 Credits		
	On completion of the course, the students will have:				
Course Outcome	1. An idea of how structures are built and project	ts are devel	oped on the		
	field		-		
	2. An understanding of modern construction pract	tices			
	3. A good idea of basic construction dynamics- va	arious stakeh	olders,		
	project objectives, processes, resources required	l and project	economics		
	4. A basic ability to plan, control and monitor co	nstruction pr	rojects with		
	respect to time and cost				
	5. An idea of how to optimize construction projec	ts based on c	costs		
	6. An idea how construction projects are admin	nistered with	n respect to		
	contract structures and issues.				
	7. An ability to put forward ideas and underst	andings to	others with		
	effective communication				
	processes				
	Basic concepts of management: Definition	- Essence,			
	Functions, Roles, Level. Functions of Management:	Planning –			
Module 1	Concept, Nature, Types, Analysis, Management by	objectives;	21		
Module 1	Organization Structure – Concept, Structure, Principles,				
	Centralization, Decentralization, Span of Manageme	ent;			
	Organizational Effectiveness.				
	Fianning:	n #0.055 - 1			
	roominess grouping circulation Driver	, prospect,			
	Regulation and Rve laws				
Modula 2	Bye Laws in respect of side space. Back and	front space	61		
wiouule 2	Covered areas. height of building etc. Lavate	ory blocks	UL		
	ventilation. Requirements for stairs, lifts in pr	ıblic			
	assembly building, offices	-			
	Fire Protection				
Module 3.	Firefighting arrangements in public assembly		2I .		
Lizouute J.	buildings, planning . offices, auditorium				
	Planning &Scheduling of constructions	Projects	ļ		
	Planning by CPM				
	Preparation of network, Determination of slack	ts or floats.

PC-CE602	ENGINEERING ECONOMICS, ESTIMATION & COSTING	2L + 0T	2	credits
Course outcome	 On completion of the course, the students will: Have an idea of Economics in general, Economics of India par public sector agencies and private sector businesses Be able to perform and evaluate present worth, future worth and a analyses on one of more economic alternatives. Be able to carry out and evaluate benefit/cost, life cycle and breaked on one or more economic alternatives. Be able to understand the technical specifications for various works performed for a project and how they impact the cost of a structure. Be able to quantify the worth of a structure by evaluating quantit constituents, derive their cost rates and build up the overall cost of the owner bidding works and how competitive bid proposal. 			ticularly for nunual worth wen analyses to be es of he structure. to submit a
Module 1	Basic Principles and Methodology of Economics: Demand/Supply – elasticity – Government Policies and Application. Theory of the Firm and Market Structure. Basic Macroeconomic Concepts (including GDP/GNP/NI/Disposable Income) and Identities for both closed and open economics. Aggregate demand and Supply (IS/LM). Price Indices (WPI/CPI), Interest rates, Direct and Indirect Taxes			3L
Module 2	Elements of Business/Managerial Econor organizations. Cost & Cost Control –Techniques, Types of Budgets, Break even Analysis, Capital Budgetin Programming. Investment Analysis – NPV, RO Depreciation, Time value of money (present ar flows). Business Forecasting – Elementary techni flow, Financial. Case Study Method.	nics and form Costs, Lifecycle g, Application of I, IRR, Payback I nd future worth o ques. Statements -	ns of costs, Linear Period, f cash - Cash	3L
Module 3	Estimation / Measurements for various items Introduction to the process of Estimation; Use of Specifications for the same, taking out qua requirements of the work, comparison of different schedules, Mass haul Diagrams, Estimating Eart Estimating Concrete and Masonry, Finishes, Inte and quantity take-offs; adding equipment costs; la Material survey-Thumb rules for computation of r different materials for buildings, percentage bre sensitive index, market survey of basic material Computers in quantity surveying	relevant Indian Stantities from the alternatives, Bar be hwork and Found eriors, MEP works bour costs; rate an materials requirem eakup of the cost ls. PC-CE603	WATER RESOURCE ENGINEERING	2L + 0T	2 Credits
Course Outcome	 On completion of the course, the students will have: Understand the fundamentals of flow in open channels. Understand the concepts of irrigation. Estimate the quantity of water required by different crops different seasons, and accordingly the irrigation water requirement Design channels and other irrigation structures required for irrigation, drainage, soil conservation, flood control and other water-management projects. Learn about groundwater resources, aquifers and wells. 		
Prerequisite	Fluid Mechanics & Hydraulic Machines [ES-0	CE301]	
Module 1	Open Channel Flow: Channel Characteristics and parameters, Energy-depth relationships, Specific Energy concept, Critical Flow, Hydraulic Jump, Uniform flow, Efficient sections, Slope profiles, Gradually Varied Flow, Water surface profiles, Rapidly Varied Flow, Hydraulic Jump.		8L
Module 2	Irrigation: Definition, Necessity, Scope, Benefits of Irrigation; Types, techniques and sources of irrigation; Development of irrigation in India, Ouality of Irrigation Water.		
Module 3:	Soil-water-plant Relationship: Types of crops, cropping seasons, water requirement of crops, base period, kor period, Duty, Delta, Commanded area, Net Irrigation Requirement, Field Irrigation Requirement, Gross Irrigation Requirement, Intensity of irrigation, Consumptive use of water, estimation of evapotranspiration, Blaney-Criddle method, Modified Penman's method, Irrigation efficiencies, Erequency of irrigation		4L
Module 4:	Canal irrigation: Classification of irrigation canals, canals in alluvium; Design of unlined canals: Kennedy's method, Lacey's method; Lined canals: advantages, materials used, typical sections, design of lined canals, economics of canal lining; Canal sections – filling, cutting, partial cutting and partial filling.		5L
Module 5:	Land drainage: Water logging issues in irrigation, provision of dra and maintenance of open drains, closed drains, disch spacing of closed drains.	ains, design arge and	2L
Module 6	Groundwater Hydraulics: Occurrence of g Aquifers, Various Types of Aquifers, Aquifer	groundwater– Parameters:-	7L

	Specific Yield, Specific Retention, Storage Coefficient,			
	Transmissivity; Compressibility of aquifers; Equation of motion:-			
	confined and unconfined flow; Steady radial flow towards wells-			
	Dupuit- Thiem' theory of well hydraulics- for both unconfined and			
	confined aquifers, Well losses, Specific capacity of well and			
	efficiency; Unsteady radial flow in confined aquifer:- Theis			
	method, Cooper-Jacob method, Chow method; Unsteady radial			
	flow in unconfined aquifer, delayed yield; Aquifer Recharge;			
	Concept of Sea water intrusion.			
	Wells: Definition, types- Open well or Dug well, Tube well. Open			
	well- Shallow open well, Deep open well, Cavity formationin open			
Modulo 7	wells, construction of open wells, yield of an open well equilibrium	31		
Widule /	pumping test, Recuperating test. Tube wells - Strainer type,	JL		
	Cavity type & Slotted type, Construction & Boring			
	of tube wells. Radial collector wells and infiltration galleries.

PC-CE604	DESIGN OF STEEL STRUCTURE	2L + 1T	3 Credits
Course Outcome	 On completion of the course, the students will have: 1. Identify the material properties of structural steel. Moreover, the students will identify different bolted and welded connections, analyze and design them for axial and eccentric loads. 2. Design different steel sections subjected to axial compression and tension following Indian codes of practices. 3. Comprehend the differences between laterally supported and unsupported flexure members. Designing of the flexure members using Indian codes of practice. 4. Analyze and design rolled and built up compression members along with base connection subjected to axial compression, bending and tension. 5. Calculate shear force and bending moment on rolled and built up girders, dimension the section and finally design it following Indian standard design guidelines. 6. Identify different components of gantry system, calculate lateral and vertical loads acting on the system, dimension the components and design them. 		
Prerequisite	Solid Mechanics [ES-CE401]		
Module 1	Materials and Specification: Rolled steel sections, mechanical properties of ste specifications for structural use. Codes of practice Steel structures using tubular, rectangular and square	eel and their s. Design of section	1L
Module 2	Structural connections: Riveted, welded and bolted including High strength bolted joints. – types of riveted & bolted joints, failure of joints ,efficiency of joints, design of bolted welded joints for axial load. Eccentric connections bolted joints subjected to torsion & shear, tension & s of riveted, bolted & welded connection.	friction grip assumptions, ed ,riveted & - Riveted & shear, design	6L+2T
Module 3:	Design of Tension members: Design of tension members, I.S code provisions. Per stresses, Design rules, Examples.	missible	3L+1T
Module 4:	Design of Compression members: Effective lengths about major & minor principal ax provisions. Permissible stresses, Design rules, Des component, two components and built up compression under axial load. Examples. Built up columns und loading: Design of lacing and batten plates, Different	es, I.S code sign of one on members er eccentric ent types of	6L+2T

	Column Bases- Slab Base, Gusseted Base, Connection details	
Module 5:	Module 5:Design of Beams: Permissible stresses in bending, compression and tension. Design of rolled steel sections, plated beams. Simple Beam end	
Module 6 Design of Plate girders: Design of webs & flanges, Concepts of curtailment of flanges – Riveted & welded web stiffeners, web flange splices - Riveted, welded& bolted.		4L+1T
Module 7	Design of Gantry Girder: Design gantry girder considering lateral buckling – I.S code provisions.	4L+1T

PC-CE605	FOUNDATION ENGINEERING	2L+0T	2Credits
Course Outcome	 On completion of the course, the students will have: 1. Determine bearing carrying capacity of shallow foundation 2. Determine the capacity of pile foundation. 3. Compute the efficiency and settlement of pile group. 4. Understand different subsoil exploration methods and interpret field and laboratory test data to obtain design parameters for geotechnical analysis. 5. Correlate bearing capacity of shallow foundation from field test data. 6. Understand and apply various types of ground improvement methods for solving complex geotechnical problems. 		
Prerequisite	Soil Mechanics – I (PC-CE403), Soil Mechanics – II	(PC-CE503).	
Module1	Soil Exploration: Purpose, Reconnaissance, Planning of sub- surface explanation, depth and number of exploration, different methods of exploration, Trial pits, Hand auger borings, Mechanical Auger borings, Wash borings, 		10L
Module2	Foundations : load on foundation, depth of foundation, shallow and deep foundations, selection criteria,		1L
Module3:	Shallow foundations : different types of footings, depth of building and bridge foundation, Bearing capacity, gross and net capacity, different types of failure, Terzaghi's bearing capacity theory, other methods, effect of depth of embedment, effect of water table, inclined load, effect of foundation shape, eccentricity of load, choice of c- ϕ for determination of bearing capacity, Bearing capacity on layered media, Bearing capacity as per 1S 6403.		10L
Module4:	Settlement: Immediate and consolidation settlement for rigidity and dimensional effects, settlement in var soil, IS-1904 recommendations.	nt, correction ious types of	6L

	Determination of allowable bearing capacity from in-situ test- SPT, SCPT and Plate load test.
Module5:	Deep foundations:Pile:Types, load transfer mechanism, classification based on material, method of installation of piles and use, construction of pile, Determination of load carrying capacities of piles by static, Dynamic formulae, and pile load test, capacity of
Module6	Ground Improvement: purpose, different Techniques – flooding, vibration, vibro-flotation, dynamic compaction, blasting, compaction grouting, reinforcement technique: stone column, compaction piles, improvement by preloading, sand drain.

PC-CE606	STRUCTURAL ANALYSIS – II 2L + 0T	2 Credits	
Course Outcome	 After going through this course, the students will be able to: 1. Apply the Slope Deflection and Moment Distribution Method to analyze indeterminate structures. 2. Develop and analyze the concept of suspension bridge and stiffness girders. 3. Apply and analyze the concepts of curved beam analysis in hooks, rings and Bow girders. 4. Develop the concept bending in unsymmetrical beams. 5. Develop the fundamental concepts of plastic analysis using kinematic method and apply them in frames and continuous beam analysis. 6. Develop and analyze the portal frames using Portal and Cantilever method. 7. Develop and analyze the indeterminate structures (continuous beams and frames) using flexibility and stiffness matrix method. 		
Prerequisite	Solid Mechanics [ES-CE401], Structural Analysis – I [PO	C-CE502]	
Module 1	Analysis of statically Indeterminate Structures: Moment distribution method-solution of continuous beam, effect of settlement and rotation of support, frames with or without side sway. Slope deflection method: method and application in continuous beams and frames. Suspension Bridge and stiffening girders		
Module 2	Curved Beam analysis: Hooks, rings and Bow girders. Unsymmetricalbending.	8L	
Module 3	Plastic analysis of structures: Beams and portal frames.	5L	
Module 4	Approximate method of analysis of structures:4LPortal and Cantilever methods.4L		
Module 5	Matrix methods of structural analysis: Stiffness and flexibility approaches for analysis of beam.	5L

	STEEL STRUCTURE DESIGN	2D	1 5 Cradita	
FC-CE091	SESSIONAL	31	1.5 Creatis	
Course Outcome	 SESSIONAL After going through this course, the studen 1. Identify the material properties of structure students will identify different bolted at analyze and design them for axial and ecceleration and ecceleration following Indian codes of practices 2. Design different steel sections subjected to tension following Indian codes of practices 3. Comprehend the differences between unsupported flexure members. Designing using Indian codes of practice. 4. Analyze and design rolled and built up conwith base connection subjected to axial context. 	ents will be able to: ctural steel. Moreover, the and welded connections, ccentric loads. I to axial compression and es. laterally supported and ng of the flexure members compression members along		
	 6. Identify different components of gantry and vertical loads acting on the system, direction and resign them. 7. Design different components of an industriation of the system of the system. 	nent on roll nally design system, cal- mension the rial building	ed and built it following culate lateral components	
Prerequisite	Design of Steel Structures (PC-CE604)			
	Design of a factory shed including preparation of necessary workin			
	drawings and report in accordance with [PC-CE604]			

PC-CE692	WATER RESOURCE ENGINEERING LABORATORY	2P	1 Credits
Course Outcome	 On successful completion of this course, student to: 1. Delineate the watershed of any reservoir using 2. Determine the average rainfall over a catchmen 3. Use the rain gauge properly for a specified pur 4. Measure the rate of infiltration of water throug 5. Measure the sunshine hours in a particular day 	should DEM. nt. pose. h the so	l be able oil.
Prerequisite	Engineering Hydrology [PC-CE402] & Water Resources Engineering [PC-CE603]		
Experiment 1	Catchment area delineation (Manually and using DEM)		
Experiment 2	Calculation of average rainfall over a catch arithmetic mean method, Thiessen polygon method Method.	hment od and	area with Isohyetal
Experiment 3	Use of different type of Rain gauges.		
Experiment 4	Measurement of infiltration rate using double ring i	nfiltro	meter.
Experiment 5	Measurement of evaporation using evaporimeter.		
Experiment 6	Measurement of bright sunshine hours using sunshi	ne reco	order.

PC-CE693	Quantity Survey Estimation and Valuation Sessional	3P	1.5 credits			
	The subject aims to provide the student w	vith:				
	1. An introduction to quantity surveying					
Course outcome	2. The capability to know analysis and sche	edule of rates				
	3. The ability to know specification of mate	erials				
	4. An understanding about specification of works					
	5. The introduction to valuation					
Prerequisite	Construction Engineering & Managen	nent, [PC-CE601], Engineering			
Trerequisite	Economics, Estimation & Costing, [PC-CE602]					
	1. Quantity Surveying: Types of estimates, approximate estimates, items of					
	work, unit of measurement, unit rate of payment.					
	2. Quantity estimate of a single storied building					
	3. Bar bending schedule.					
	4. Details of measurement and calculation of quantities with cost, bill of					
	quantities, abstract of quantities.					
	5. Estimate of quantities of road, Undergro	ound reservoir, Sur	face drain,			
	Septic tank.					
	6. Analysis and schedule of rates: Earthw	ork, brick flat sol	ing, DPC, PCC			
	and RCC, brick work, plastering, floorin	g and finishing,				
	7. Specification of materials: Brick, cemen	t, fine and coarse a	ggregates			
	8. Specification of works: Plain cement con	ncrete, reinforced c	cement concrete,			
	first class brickwork, cement plastering	g, pointing, white	washing, colour			
	washing, distempering, lime punning, pa	inting and varnish	ing			
	9. Valuation: Values and cost, gross inco	ome, outgoing, ne	t income, scrap			
	value, salvage value, market value, Boo	ok Value, sinking f	fund, capitalised			
	value, Y. P., depreciation, obsolescenc	e, deferred incom	e, freehold and			
	leasehold property, mortgage, rent fixati	on, valuation table				

PC-CE694	COMPUTER APPLICATIONS IN CIVILENGINEERING	2P	1 Credits	
Course Outcome	 On successful completion of this course, student s 1. Use the computer as a problem-solving tool. 2. Identify and formulate Civil Engineering problem computers. 3. Perform linear algebra and matrix operations a application to solve Civil Engineering problems 4. Solve sets of linear equations and determine root equations 5. Construct, interpret and solve simple optimization 6. Develop programs for Civil Engineering analysis problems. 7. Use various software used in industries for analysis 	hould ms solv nd the s ts and r on prob s and c	be able to: vable by ir nonlinear lems lesign	
Prerequisite	Programming for Problem Solving, Comp EngineeringDrawing.	uter-ai	ded Civil	
Module 1	Introduction: Concept of problem-solving using computer, use of programming language and software for problem solving; Identification of various design and analysis problems in different fields of Civil Engineering to be solved using computers; Procedure, formulae and data related to the analysis and design of such problems.			
Module 2	Use of spreadsheets: Learning spreadsheets like MS Excel, matrix analysis, use of Goal Seek and Solver, Optimization Tools; Plotting. Applications to problems involving tabular data, CE estimation, surveying, and design problems.			
Module 3	Programming Languages: Learning at lease Fortran 2003/2008/2018, C++11/C++14, Python Computing platforms like Matlab/Scilab/Ma analysis and design problems in areas like surver structural analysis, RCC design, soil mechanics and foundation, transportation, water	st on n 3, athCA eying, resour	e language: VBA 7.0; D; Solving hydraulics, cces, etc.	
Module 4	Use of Software: Familiarity with widely used software like STAAD Pro, HEC- RAS, HEC-HMS, S Roads, etc.; Solving at least two such analysis/design	Civil SWMM proble	Engineering I, Mx ems.	

HU-CE701	FINANCIAL MANAGEMENT AND ACCOUNTS	3L	3 credits
Course outcome	 After going through this course, the stude 1. Explain the concept of fundamental value of money. 2. Apply capital budgeting projects usi 3. Analyse he main ways of raising cap and disadvantages in different circur 4. Integrate the concept and apply the frand do the capital budgeting 	ents will be able to financial concepts ng traditional meth ital and their respec- nstances. inancial concepts to	especially time ods. otive advantages o calculate ratios

PE-CE701A	GIS & REMOTE SENSING	3L	3 credits	
	After going through this course, the stude	ents will be able to):	
Course outcome	 Define and state the scope GIS & remote sensing in civil engineering Understand the basic principles of remote sensing and GIS Apply the various methods of remote sensing and GIS to different geospatial datasets Analyze the different results obtained from different remote sensing data sources Evaluate the different results in solving real world problems. Design and construct optimum solutions for real world problems that can be resolved by GIS & remote sensing 			
Prerequisite	Knowledge of Class-XII level physics, Surv	eying & Geomatic	s PC-CE301	
Module 1	Fundamentals of Remote Sensing: Energy sources and radiation principles; Spectrum; Energy interactions in the atmo- earth surface features; Atmospheric window response patterns and spectral signatures.	Electromagnetic osphere and with vs; Spectral	4L	
Module 2	Digital Image Processing: Image rectification and restoration; Ima Image classification; Accuracy assessmen detection; Spatial, spectral, radiometric an resolution characteristics of IRS, Landsat ar	6L		
Module 3	Advanced Remote Sensing: Microwave remote sensing: Frequency and wavelengths, polarization, range and azimuth resolution, relief displacement, foreshortening, layover, shadows and speckles; Synthetic Aperture Radar (SAR); Indian microwave sensors; Working principles of LiDAR remote sensing			
Module 4	Advanced Digital Image Processing: Principal Component Analysis (PCA); Transformation; Fourier Transformation Hybrid classification system.	4L		
Module 5	GIS: Definition, components and applications of attribute data; Raster vs. Vector GIS; Con Non-topological data structures	GIS; Spatial and cept of topology;	4L	
Module 6Database and Coordinate System: Concepts of Relational Data Base Management System (RDBMS) and geodatabase; Spatial and attribute query; Datum and projection; Universal Transverse Mercator (UTM) grid system: On-the-fly projection				
Module 7	Spatial Data Analysis: Concepts of local, focal, zonal and global an analysis; Distance measurement; Raster an Spatial interpolation; DEM and TIN, Cost s	nalysis; Proximity d vector overlay; urface analysis	6L	

Module 8	Appl Wate and a Urban chang	5L		
	1	Remote Sensing and Image Interpretation	Thomas M. Lillesand Ralph W. Kiefer Jonathan W. Chipman	Wiley India Edition
	2 Intr 2 Infe	Introduction to Geographic Information Systems	Kang-tsung Chang	Tata McGraw- Hill Publishing Company Limited

PE-CE702A		PRE-STRESSED CONCRETE	2L	2 CREDITS			
Course Outcome	 After going through this course, the students will be able to: 1. Learn the introduction of Pre-stressed concrete member and its deflection properties 2. Develop the design criteria of Pre-stressed concrete section for flexure and shear properties 3. Analyze the anchorage zone stress for post-tensioned members 4. Impart knowledge regarding the methods of Analysis of Statically Indeterminate Structures. 5. Impart knowledge regarding the composite construction of Prestress and In-situ concrete. 6. Impart knowledge regarding Design of Pre-stressed concrete poles and sleepers and introduction of partial prestressing. 						
Prerequisite	Solic Struc	Solid Mechanics (ES-CE401), Structural Analysis – I (PC-CE502), Design of RCC Structures (PC-CE501), Structural Analysis II (PC-CE606)					
Module 1	Intro analy resis torsic Defl short	oduction of Pre-stressed concrete: Mysis of prestress and bending stress, lost tance: design of shear reinforcement, of on shear and bending. ections of Pre-stressed concrete ment term and long term deflection	8L				
Module 2	Shea Desi Limi Meth Desi by L	ar and Torsional Resistance: Design gn of Reinforcement for Torsion, Shea it State Design Criteria: Inadequacy nod, Criteria for Limit States, Strength gn of Pre-stressed Concrete Section in and Magnel	8L				
Module 3	Ancl distri	horage Zone stresses in post tension ibution in end block, anchorage zone r	3L				
Module 4	Stati Mem Meth	ically Indeterminate Structures: Advances of Prestressing, Methods of of Analysis of Secondary Moment	4L				
Module 5	Com Type	posite Construction of Pre-stressed es, Analysis of Stresses	and In-situ Concrete:	3L			
Module 6	Pre- Com	stressed Concrete Poles and Sleeper pression and Bending. Introduction to	s: Design of Sections for Partial Prestressing.	2L

PE-CE702C	REPAIR & REHABILITATION OF STRUCTURES	2L	2 Credits	
Course Outcome	 On completion of the course the students will be able to: 1. Various distress and damages to concrete and masonry structures 2. The importance of maintenance of structures, types and properties of repair materials etc 3. Assessing damage to structures and various repair techniques 			
Prerequisite	Solid Mechanics [CE(ES)401], Structural Analysis – Structures [CE(PC)501], Concrete Technology [CE(PC)	I [CE(PC)502], I)401].	Design of RC	
Module 1	Introduction: Overview of distress, deterioration in constructures, Scenario of distressed structures world over, repairs and upgrading of structures, General introduction (Road-map) to a durable concrete repair.	ncrete Need for n to process	3L	
Module 2	Deterioration of concrete structures: Types of deterioration – Signs, causes & symptoms, Mechanism of deterioration, contributing factors like permeability, inadequate durability & micro-structure of concrete. Physical deterioration due to moisture, temperature, shrinkage, freeze-thaw, abrasion, erosion, cavitation, crystallization of salts, Efflorescence, exposure to severe environment like marine exposure. Chemical deterioration due to corrosion of reinforcement (chloride induced, carbonation induced), Alkali-silica reaction, sulphate attack, Acid attack Deterioration due to water leakage, fire – detection & mitigation of the same. Deterioration due to ageing, inadequate maintenance, Design & construction deficiencies, overloading etc. Types of cracks, causes & characteristics of cracking in various structural components like beam, column, slab, masonry walls. Measurement of cracks, interpretation of the cause of particular type of crack.			
Module 3	Conditional/damage assessment & Evaluation of structures: Structural assessment: Conditional evaluation / Structural Appraisal of the structure – Importance, objective & stages, Conditional/damage assessment procedure, Preliminary & Detailed investigation – Scope, Objectives, Methodology & Rapid visual inspection of structures Damage Assessment allied Tests (Destructive, Semi-destructive, Non-destructive): Field & laboratory testing procedures for evaluating the structure for strength, corrosion activity, performance & integrity, durability.			
Module 4	Interpretation of the findings of the testsRepairs, rehabilitation & Retrofitting of concrete structures: Repair materials - Criteria for durable concrete repair, Methodology, performance requirements, repair options, selection of repair materials, Preparatory stage of repairs, Different types of repair materials & their application, types of repair techniques.Retrofitting/Strengthening:Needfor retrofitting, Design philosophy of strengthening structures, Techniques available for strengthening including conventional and advanced techniques.Seismic retrofit, Design philosophy, Techniques to enhance the seismic resistance of structures, advanced techniques for making seismic resistant structures

PE-CE703A	AIR AND NOISE POLLUTION AND CONTROL	2 L	2 credits		
Course outcome	 After going through this course, the students will be able to: Define the basic concepts and terminologies regarding air pollution and noise pollution Describe the physics of air pollution and noise pollution Apply the methods of air pollution and noise pollution measurements Analyze different concepts of air and noise pollution solving mathematical problems Compare air and noise quality with allowable standards and limits Choose and design proper techniques for air pollution control and noise pollution control 				
Prerequisite	Class-XII level knowledge of Physics, Chemistry, Mathematics, Biology and Environmental Science; Undergraduate level knowledge of Statistics and Environmental Engineering				
Module 1	Air PollutantsSources; Classification; Effects on Human, Vegetation, MaterialEffects of Air pollution on Atmosphere: Photochemical Smog,Ozone Layer Depletion, Acid Rain, Greenhouse Effect andGlobal Warming				
Module 2	Air Pollution MeteorologyLapse Rate; Atmospheric Stability; Inversion; Plume Pattern				
Module 3	Dispersion of Air Pollutants Point Source Gaussian Plume Model, Stability Class Charts, Design of Stack Height	3L			
Module 4	Air Quality Methods of Measurement: Gaseous pollutants, pollutants Air Quality Standards and Indices: A Quality Standard, NAAQS, Emission Standard, Indices	4L			
Module 5	Air Pollution ControlControl of Gaseous Pollutants: Adsorption, Absorption,Condensation Control of Particulate Pollutants: Settlingchambers, Cyclone separators, Wet collectors, Fabric filters,Electrostatic precipitators Control of Pollution fromAutomobiles				
Module 6	Physics of Noise Basics of Acoustics; Sound Pressure, Power and In their Interrelations	ntensity and	2L		
Module 7	Measurement of Noise Noise Level; Interrelation between Noise, Pressure Intensity Levels; Noise Meter; Noise Networks; Fred Analysis; Decibel Addition Measurement of Comm Noise: LN, Leq, Ldn,, LNP	, Power and quency Band nunity	6L		

	Sour	21		
Module 8	Psyci	noacoustics and noise criteria; ef	fects of noise on health;	2L
	anno	vance rating schemes		
	Noise	e Pollution Control		
Module 9	Noise	e Standards and Limits; Method	s of Noise Pollution	4 L

PE-CE705B	1	URBAN TRANSPORTATION	PLANNING	2L	2	Credits
Course Outcome	 After going through this course, the students will be able to: 1. Urban morphology 2. Advantages and disadvantages of urban transportation system 3. To design urban transportation system 4. To apply ICT to improve urban transportation system 					
Prerequisite	Class-X knowle and Tra	KII level knowledge of Physics, dge of Engineering Statistics, Er ansportation Engineering [PC-CE	Mathematics and Mathematics and Magineering Physics, 505]	lechanics; Un Soil Mechani	dergrac cs- I [E	luate level ES-CE401]
Module 1	Introduction Urban morphology: Urbanization and travel demand – Urban activity systems and travel patterns – Systems approach – Trip based and Activity based approach					4L
Module 2	Urban Transportation Planning: Goals, Objectives and Constraints - Inventory, Model building, Forecasting and Evaluation - Study area delineation – Zoning - UTP survey. Trip generation models – Trip classification - productions and attractions – Trip rate analysis - Multiple regression models - Category analysis. Trip distribution models – Growth factor models, Gravity model and Opportunity modes. Modal split models – Mode choice behavior – Trip end and trip interchange models - Probabilistic models – Utility functions - Logit models - Two stage model. Traffic assignment – Transportation networks – Minimum Path Algorithms - Assignment methods – All or Nothing assignment, Capacity restrained assignment and Multi path assignment - Route-choice behavior				21L	
Module 3	Scope of UTP in present scenario: Financing of Project – urban development planning policy - Case studies				5L

PE-CE705C	RAIL	WAY AND AIRPORT ENGINI	EERING	2L+0T	2 credits
Course outcome	 On completion of the course the students will be able to: Explain the basics in planning functional components of Railway and Airport. Illustrate the engineering concepts of construction, operation and maintenance of Railway and Airport components. Interpret the geometric design parameters of Railway Decide the runway orientation of proposed runway on the basis of previous wind data analysis Assess the basic runway length parameters. 				
Prerequisite	Class- Streng	XII level knowledge of Physics, I gth of Materials.	Mathemati	cs; Undergraduate l	evel knowledge of
Module 1	 Introduction to Railway Engineering: Socio-economic impact of Indian Railways; Zonal classification of Indian Railways; Railway track gauge; Classification of Indian Railways based on Speed Criteria. Permanent Way (P-way): Components – Rails, Rail joints, Sleepers, Ballast, Fastenings, Sub-grade. Track Alignment and Engineering Survey: Basic requirement of good alignment; Factors in selection of good alignment; Engineering Survey. Track Stresses. Geometric Design: Gradient, Speed, Degree of Curve, Super- elevation, Transition curve, Widening of gauge on curves, Shift. Points and Crossings; Station and Yards; Signalling and Control Systems. 			20L	
Module 2	Airport EngineeringAirport Site Selection; Airport layout; Functions and planning of theAirfield components – runway, taxiway and Aprons, hanger, terminalbuilding and control tower;Design of Runway and Taxiway;Runway orientation: Windrose diagrams

PE-CE801A	COMPUTATIONAL HYDRAULICS	3L	3 credits		
	After going through this course, the students will be able to:				
	1. Identify the complexities involved in fluid f	low problems.			
	2. Model the specific flow problem in term	ns of defining	the governing		
	equations, initial and boundary conditio	ons and appro	priate solution		
Course outcome	schemes to use.				
	3. Develop finite difference formulation of or	rdinary and par	rtial differential		
	equations of flow problems.				
	4. Develop finite volume formulation of ord	linary and par	tial differential		
	equations of flow problems.				
Proroquisito	Fluid Mechanics & Hydraulic Machines [ES-CE301], Water Resources				
Trerequisite	Engineering [PC-CE603]				
	Introduction: Modelling Theory - Physical	l modelling,			
	analytical modelling, numerical modelling; class	ssification of			
Modulo 1	models based on i) Scale (space and time),	ii) Solution	41		
With a little in the little in	(analytical and numerical); Concept of c	computational	412		
	hydraulics; Processes involved in model deve	elopment and			
	application.				
	Modelling Fluid Flow Problems: Governin	g equations-			
	Conservation of mass, conservation of	momentum,			
Module 2	conservation of energy; Mathematical classification	ation of flow			
	equations, solution of ordinary differential equations	quations and	81		
	partial differential equations, boundary condition	s; Solution of	oL		
	Saint-Venant Equations - Kinematic wave solut	tion,Diffusive			
	wave solution and full dynamic solution;				
	Characteristic form of Saint-Venant Equations.				
	Numerical Solution Schemes: Discrete	solution of			
Module 3	governing equations, Space discretization - Stru	uctured grids	2 L		
	and unstructured grids, grid generation, time disc	cretization.			
	Finite Difference Method: General concept, ap	pproximation			
	of derivatives; Finite difference formulation	for ordinary			
Modulo 4	differential equations - Explicit schemes, Impl	icit schemes,			
	Mixed schemes and weighted average sche	emes; Finite	8 T.		
Wibuult 4	difference formulation for partial differential	equations -	0L		
	initial conditions, boundary conditions, explicit	and implicit			
	schemes; The Preissmann Scheme, The Abbo	tt-Ionescu			
	scheme.				
	Example Applications: Ordinary differential	l equation -			
	Solution of linear reservoir problem; Partial	l differential	61.		
	equation - Solution of simple wave propagation	n, Solution of	UL		
	diffusion equation.				
Module 5	Finite Volume Method: General concept	t, Steps in	8L		

	application of Finite Volume Method- Surface and volume integrals, Discretization of convective fluxes, Discretization of diffusive fluxes, evaluation of time derivative, boundary conditions.			
	Example Application: Solution of Advection-Diffusion Equation in 1-D.	4L

Ferziger and M. Peric Springer, London, 2002. 			

PE-CE801B	HYDRAULIC STRUCTURES	3L	3 credits		
	After going through this course, the stude	:			
	1. Identify the characteristics of various	ypes of dams and	l their selection		
	procedure.				
	2. Perform the reconnaissance survey an	d, geophysical inv	vestigations		
Course outcome	necessary for selection of suitable dam s	site			
Course outcome	3. Estimate forces acting on a gravity dama	s and perform stab	ility analysis.		
	4. Estimate the seepage loss through em	bankment dams a	nd suggest		
	necessary remedial measures.				
	5. Calculate the discharge through the overflow section and design the				
	appropriate energy dissipation structures	5.			
Prerequisite	Water Resources Engineering [PC-CE603]				
Madula 1	Storage Structures: Dams, Types of Dams	21			
Module 1	dams, gravity dams, various components and	their functions	2 L		
	Selection of Dam Site: Site investigation				
	reconnaissance survey, geophysical	investigations,			
	preliminary selection, evaluation of selected				
Module 2	types of foundation testing, field testing	and borrow pit	6L		
	investigations, detailed investigations;	assessment of			
	foundation characteristics and suitability; sel	lection of type of			
	dam.				
	Gravity Dam: Definition, Features of some	important gravity			
	dams, Forces acting on a gravity dam, estima	tion of forces due			
	to: self-weight, water pressure on upstream				
	face, Uplift pressure, wave pressure, silt				
	pressure, earthquake forces, hydrodynamic	forces; Stability			
Module 3	analysis - load combinations, codal provi	sions, modes of	10L		
	failures - overturning, sliding, tension a	ind compression			
	failures, factors of safeties, principal stress	sses; Elementary			
	profile of a gravity dam - forces acting, mini	mum base width			
	- no tension, no sliding basis, principal				
	stresses.				
	Embankment Dams: Definitions, Features	of someimportant			
	embankment dams; Types of embankment	dams and their			
	sectional features; Design criteria; Freebo	oard - necessity,			
	estimation procedure; Seepage analysis -	Laplace's flow			
Module 4	equations, drainage blanket and rock to	e, phreatic line,	8L		
	graphical procedure of drawing phreatic lin	ne, estimation of			
	seepage loss; Stability analysis of embankr	nent dams – slip			
	circle method; Seepage Control - cut-offs, sl	urry trench,			
	sheet piling, grouting, slope protection.				
	Diversion headworks: Necessity and uses	, different types,	6L		

	layout and different components; weirs on permeable				
	foundation, Creep theories, Khosla's method; Different types				
	of modules, Canal escapes, Silt control devices.				
	Spillways and Energy Dissipation Structures: Necessity,				
types, selection, spillway gates; High overflow ogee spillway					
Module 5	6L				
	affecting coefficient of discharge, codal provisions. stilling				
	basins (USBR and BIS) types

OE-CE801C	GR	OUNDWATER CONT	AMINATION	3 L	3 Credits	
Course Outcome	On 1. 7 2. 7	 To be able to understand the principles and theories groundwatercontamination To be able to formulate the various remedial mean groundwater contamination 				
Prerequisite	Bas Hyd	ic Sciences, Hydrolog drology	gy, Meteorology a	nd G	roundwater	
Module 1	Int: Def vari sub	Introduction: Definition of groundwater, hydrological properties of various water bearing strata, vertical distribution of subsurface water, groundwater in hydrologic cycle			2L	
Module 2	Groundwater Hydraulics: Darcy's Law, Dupuit's assumption, Application of Darcy's Law for simple flow systems, Governing differential equations for confined and unconfined aquifers, steady and unsteady flow solutions for fully penetrating wells, partially penetrating wells, Interference of wells, Test pumping analysis with steady and unsteady flows Delayed yield method of images			7L		
Module 3:	Groundwater quality:			3L		
Module 4:	Groundwater pollution: Sources, Remedial and preventive measures			3L		
Module 5:	Groundwater conservation: Groundwater budget, seepage from surface water, artificial recharge withreclamation			3L		
Module 6:	Models for Groundwater flow: Sampling & Monitoring methods, transport mechanisms, modeling (advective and dispersive transport), (adsorption and chemical reaction), biodegradation kinetics, numerical flow and transport modeling, waste site characterization/investigation, groundwater remediation, legal issues in groundwater contamination			10L		
	SI.	Book Name	Author	Publi Hous	shing e	
Reference	1	Elements of Hydrology and Groundwater	R.N. Saxena & D.C. Gupta	PHI		
incirciteitet	2	Groundwater Contamination, Performance,	Anna L Powell	Nova Publis	Science	

	Limitations and Impacts					
3	Groundwater Contamination an Remediation	nd	Edite D. Davi	edby Timotl Scheibe d C. Mavs	hy &	MDPI

OE-CE802A	SOFT SKILL AND PERSONALITY DEVELOPMENT	3L	3 credits	
Module 1	Self-Growth i)Self-Growth- Maslow's Hierarchy of N ii) Anger, Stress & Time Management- application iii) SWOT Analysis	6L		
Module 2	Stepping Up i) Growth & Environment ii) Compet Responsibility Factor	7L		
Module 3	Professional Communicationi) Impression Management- theory on socialEmployability Quotient iii) Cross-cultural complexity	6L		
Module 4	Leadership & Team Playing i) Leadership & Team Playing: Theories, Motivation, Negotiation Skills, Conflict Planning & Envisioning: Initiative and Inno Work Environment- De Bono's Six Thinking	6L		
Reference	 Work Environment- De Bono's Six Thinking Hats 1. Personality Development and Soft Skills, Barun K. Mitra, Oxfo University 2. Soft Skills: An Integrated Approach to Maxmise Personality, Gajendra Singh, Chauhanand Sangeeta Sharma, Wiley 3. The Ace of Soft Skills: Attitude, Communication and Etiquette f Success, Gopalaswamy Rameshand Mahadevan Ramesh, Pearson 			

OE-CE802B	URBA	N HYDROLOGY AND HYDR	RAULICS	3L	3 credits
Course outcome	After g 1. 2. 3. 4.	 After going through this course, the students will be able to: develop intensity duration frequency curves for urban dra develop design storms to size the various components of systems. apply best management practices to manage urban flood prepare master drainage plan for an urbanized area. 			
Prerequisite	Fluid I Resour	Mechanics & Hydraulic Machin ces Engineering	es, Engineerin	g Hydrolo	gy and Water
Module 1	Introd hydrolo urbanis	Introduction: Urbanisation and its effect on water cycle – urban hydrologic cycle – trends in urbanisation – Effect of urbanisation on hydrology.			
Module 2	Precip and run for dea Freque system	Precipitation Analysis: Importance of short duration of rainfall and runoff data, methods of estimation of time of concentration for design of urban drainage systems, Intensity-Duration - Frequency (IDF) curves, design storms for urban drainage systems.			
Module 3	Calculation Methods and Mathematical Tools: Modelling formulas, Hydrologic models, Hydrodynamic models, Regression analysis, Urban runoff and water quality models				5L
Module 4	Approaches to urban drainage: Time of concentration, peak flow estimation approaches, rational method, NRCS curve number approach, runoff quantity and quality, wastewater and stormwater reuse, major and minor systems.				4L
Module 5	Elements of drainage systems: Open channel, underground drains, appurtenances, pumping, source control.				4L
Module 6	Analys design detenti models	Analysis and Management: Stormwater drainage structures, design of stormwater network- Best Management Practices– detention and retention facilities, swales, constructed wetlands, models available for stormwater management.			
Module 7	Master typical resourc objecti	Master drainage plans: Issues to be concentrated upon – typical urban drainage master plan, interrelation between water resources investigation and urban planning processes, planning objectives, comprehensive planning, use of models in planning.

OE-CE802C	ENVII AND I	RONMENTAL IMPAC' LIFE CYCLE ANALYSI	T ASS ES	SESSMENT	3L	3 credits
Course outcome	After g 1. To sca 2. To lea 3. To ba	 To understand and evaluate the impact of any activity (scale) on the surrounding environment To be able to formulate mitigation strategies to protect th leading to sustainability To be able to understand the intricacies of Life Cycle Anal basic knowledge for coherent existence 				arge or small e environment ysis and apply
Prerequisite	Basic Engine	Sciences, Biology, Er ering	nvironn	nental Scienc	e and I	Environmental
Module 1	Introd Enviro	uction Definition, Object nmental Impact Assessme	ctive v ent (EIA	with legal as A)	spect of	2L
Module 2	Metho Scopin	dology for EIA with Bag and Public Consultation	ase Lin	e Studies, Sci	reening,	4 L
Module 3	EIA A Analys	EIA Analysis Data Collection & Environmental Impact Analysis, preparation of EIA report				5L
Module 4	EIA Mitigation and Audit- Mitigation and Impact Management with various case studies, Environmental Audit				5L	
Module 5	Introduction to Life Cycle Analysis (LCA): History, Definition, Standards and structure of LCA Goal and Scope of LCA: System of a product with boundary, unit process and functional unit				2L	
Module 6	Life C Identifi Critica Bases,	Life Cycle Interpretation and Inventory: Limitation of LCA, Identification of significant issues, Evaluation, Reporting, Critical Review. Inventory: Data Collection, Data Bases, Allocation, Validation				3L
Module 7	LCA Impact Assessment and Practice: Categories, Classification, Normalization, LCA Management, Life Cycle thinking, Sustainability				ategories, fe Cycle	4 L

PR-CE881	PROJECT- II	12P	6 credits		
	After going through this course, the stude	nts will be able to	:		
	1. Work in a team and effectively communi	cate with team me	mbers		
	2. Review and evaluate the literature available	ole related to chose	en problem		
	3. Formulate new expressions, equations t	to solve that selec	cted problem to		
Course outcome	enhance problem solving skill				
	4. Validate theoretical and reported data with results obtained from				
	numerical/ experimental/ analytical study				
	5. Identify scope of future studies				
	6. Prepare a report and presentation of proje	ect.			
Prerequisite	Undergraduate level knowledge of Civil Engineering				
A final / detailed	project to be completed, a Thesis on that	topic to be subm	itted and to be		
appeared in a semi	inar to defend the submitted final project.				

PR-CE882	COMPREHENSIVE VIVA VOCE	0P	1 credits		
	After going through this course, the students will be able to:				
Course outcome	 Analyze various applications of civil engineering in real life problem solving 				
	3. Accustomed with virtual environment of technical interview				
Prerequisite	Undergraduate level knowledge of Civil Engineering				
Each student has to appear for final viva.					

PR-CE883	SEMINAR	0 P	1 credits	
	After going through this course, the stude	nts will be able to	:	
Course outcome	1. Choose a topic related to analysis, design	gn, maintenance a	nd management	
	of civil engineering system/process.			
	2. Carry out review of existing literature in line with the assigned topic.			
	3. Prepare and present a technical report following standard guidelines.			
	4. Develop attitude for observational and in	terpretative skills.		
Prerequisite	Undergraduate level knowledge of Civil Engineering			
Each and every student have to appear in Group Discussion, Self-Introduction, Technical seminar				
& non-technical se	eminar on very recent topics.			

PR-CE884	INTERNSHIP EVALUATION	0 P	0 credits
Course outcome	 After going through this course, the students will be able to: Provides an insight to students about what is happening in the real world. Helps students to get practice in works in industry which will be of immense help to them later when they join for jobs in industry after their course completion. Enhance students' knowledge in engineering subjects 		
Prerequisite	Undergraduate level knowledge of Civil Engineering		
Each and every student has to deliver a seminar on Industrial Training conducted after 6th			
semester.
