Course Outcomes
On completion of the course students will be able to
HSMC-301.1 Make different economic decisions and estimate engineering costs
by applying different cost estimation models.
HSMC-301.2 Create cash flow diagrams for different situations and use different interest formulae to solve associated problems.
HSMC-301.3 Take decisions regarding different engineering projects by using
various criteria like rate of return analysis, present worth analysis, cost-benefit
analysis etc.
various concepts like expected value, estimates and simulation.
HSMC-301.5 Understand the concepts of depreciation and replacement analysis and solve associated problems.
HSMC-301.6 Understand the process of inflation and use different price indices to
adjust for its effect.
HSMC-301.7 Apply the various concepts of Accounting like balance sheet and
ratio analysis.
HSMC-301.8 Understand the scope of Finance and the role of financial planning
and management.

Biol	Biology for Engineers							
Code	Code: BS-CH301							
Cont	Contact: 2L							
Name	e of the Course: Biology for Engineers							
Cours	se Code:	Semester: III						
Durat	tion: 6 months	Maximum Marks: 100						
Teach	ning Scheme		Examination Scheme					
Theor	ry: 2 hrs./week		Mid Semester exam: 1	5				
Tutor	rial: NIL		Assignment and Quiz:	10 marks				
Pract	ical: hrs./week		Attendance: 5 marks					
	End Semester Exam : 7							
Credi	t Points:	2						
Objec	tive:							
1	To introduce mod	ern biology with an emphasis c	on evolution of biology a	as a				
	multidisciplinary	field.						
2	To make students	aware of application of engine	ering principles in biolo	ogy and				
	engineering robus	st solution inspired by biologica	al examples.					
Pre-R	Pre-Requisite							
1								
Unit		Content		Hours				
				or				
				lectures				
1	Introduction:			2				

	Bring out the fundamental differences between science and engineering by drawing a comparison between eye and camera, Bird flying and aircraft. Mention the most exciting aspect of biology as an independent scientific discipline. Why we need to study biology? Discuss how biological observations of 18th Century that lead to major discoveries. Examples from Brownian motion and the origin of thermodynamics by referring to the original observation of Robert Brown and Julius Mayor. These examples will highlight the fundamental importance of observations in any scientific inquiry. Purpose: To convey that Biology is as important a scientific discipline	
	as Mathematics, Physics and Chemistry	
2	Classification: Hierarchy of life forms at phenomenological level. A common thread weaves this hierarchy Classification. Discuss classification based on (a) cellularity-Unicellular or multicellular (b) ultrastructure- prokaryotes or eucaryotes.(c) energy and Carbon utilization - Autotrophs, eterotrophs, lithotropes (d) Ammonia excretion – aminotelic, uricoteliec, ureotelic (e) Habitataacquatic or terrestrial (e) Molecular taxonomy- three major kingdoms of life. A given organism can come under different category based on classification. Model organisms for the study of biology come from different groups. E.coli, S.cerevisiae, D. Melanogaster, C. elegance, A.Thaliana, M. musculus Purpose: To convey that classification per se is not what biology is all about. The underlying criterion, such as morphological, biochemical or ecological be highlighted.	3
3	Genetics Mendel's laws, Concept of segregation and independent assortment. Concept of allele. Gene mapping, Gene interaction, Epistasis. Meiosis and Mitosis be taught as a part of genetics. Emphasis to be give not to the mechanics of cell division nor the phases but how genetic material passes from parent to offspring. Concepts of recessiveness and dominance. Concept of mapping of phenotype to genes. Discuss about the single gene disorders in humans. Discuss the concept of complementation using human genetics. Purpose: To convey that "Genetics is to biology what Newton's laws are to Physical Sciences"	4
4	Biomolecules Molecules of life. In this context discuss monomeric units and polymeric structures. Discuss about sugars, starch and cellulose. Amino acids and proteins. Nucleotides and DNA/RNA. Two carbon units and lipids. Purpose: To convey that all forms of life has the same building blocks and yet the manifestations are as diverse as one can imagine	4
5	Enzymes Enzymology: How to monitor enzyme catalyzed reactions. How does an enzyme catalyzereactions. Enzyme classification. Mechanism of enzyme action. Discuss at least two examples. Enzyme kinetics and kinetic parameters. Why should we know these parameters to understand biology? RNA catalysis.	4

	Purpose: To convey that without catalysis life would not have existed	
	on earth	
6	Information Transfer	4
	Molecular basis of information transfer. DNA as a genetic material.	
	Hierarchy of DNA structure- from single stranded to double helix to	
	nucleosomes. Concept of genetic code. Universality and degeneracy of	
	genetic code. Define gene in terms of complementation and	
	recombination.	
	Purpose: The molecular basis of coding and decoding genetic	
	information is universal	
7	Macromolecular analysis	5
	Proteins- structure and function. Hierarch in protein structure.	
	Primary secondary, tertiary and quaternary structure. Proteins as	
	enzymes, transporters, receptors and structural elements.	
	Purpose: How to analyses biological processes at the reductionistic	
	level	
8	Metabolism	4
	Thermodynamics as applied to biological systems. Exothermic and	
	endothermic versus endergonic and exergoinc reactions. Concept of	
	Keq and its relation to standard free energy. Spontaneity. ATP as an	
	energy currency. This should include the breakdown of glucose to CO2	
	+ H2O (Glycolysis and Krebs cycle) and synthesis of glucose from CO2	
	and H2O (Photosynthesis). Energy yielding and energy consuming	
	reactions. Concept of Energy charge	
	Purpose: The fundamental principles of energy transactions are the	
0	same in physical and biological world.	2
9	Microbiology Concept of single celled organisms. Concept of species	3
	and strains. Identification and classification of microorganisms.	
	and modia compositions. Crowth kinetics	
	and media compositions. Growth kinetics.	
Text	book and Reference books:

	5) Microbiology, Prescott, L.M J.P. Harley and C.A. Klein 1995. 2nd editio	on Wm, C.
	Brown Publishers	
Cour	se Outcomes	
	After studying the course, the student will be able to:	
	BS-CH301.1. Describe how biological observations of 18th Century that	lead to
	major discoveries.	
	BS-CH301.2. Convey that classification per se is not what biology is all a	bout but
	highlight the underlying criteria, such as morphological, biochemical an	d
	ecological	

BS-CH301.3. Highlight the concepts of recessiveness and dominance during the passage of genetic material from parent to offspring
BS-CH301.4. Convey that all forms of life have the same building blocks and yet the manifestations are as diverse as one can imagine
BS-CH301.5. Classify enzymes and distinguish between different mechanisms of enzyme action.
BS-CH301.6. Identify DNA as a genetic material in the molecular basis of information transfer.
BS-CH301.7. Analyse biological processes at the reductionistic level
BS-CH301.8. Apply thermodynamic principles to biological systems.
BS-CH301.9. Identify and classify microorganisms.

Digital Electronics

Course Outcomes		
Course Outcomes		
At the end of this course, students will demonstrate the ability to		
PCC-CS301.1 Understand basic structure of digital computer, stored program		
concept and different arithmetic and control unit operations.		
PCC-CS301.2 Understand basic structure of different combinational circuits		
multiplexer, decoder, encoder etc.		
PCC-CS301.3 Perform different operations with sequential circuits.		
PCC-CS301.4 Understand memory and I/O operations.		

Data Structure and Algorithms Code: PCC -CS302		
Contact: 3L		
Name of the Course:	Data Structure and	Algorithms
Course Code: PCC -CS302	Semester: III	
Duration: 6 months	Maximum Marks: 100	
Teaching Scheme		Examination Scheme
Theory: 3 hrs./week		Mid Semester exam: 15
Tutorial: NIL		Assignment and Quiz: 10 marks
Practical: hrs./week		Attendance: 5 marks
		End Semester Exam : 70 Marks
Credit Points:	3	

Objective:

1 To	b learn the basics of abstract data types.
------	--

- 2 To learn the principles of linear and nonlinear data structures.
- 3 To build an application using sorting and searching

Pre-Requisite

1 Basic Computation and Principles of problem solving with C, basics of set theory

Unit	Content	Hours
		or
		lectures
1	 Data, Information, Abstract Data Type, Data Structure, Relation between Abstract Data Type and Data structures, Algorithm, Characteristics of an Algorithm; Introduction to Data Structure, Classification of Data Structures Data Structure Operations: insertion, deletion, traversal, sorting, merging etc.; Different cases of Time Complexities:Best case, Average case, Worst case, Example 	8

	Asymptotic Notations (O , o , Ω , ω , Θ):Necessary of asymptotic	
	notations in Data Structure, Big oh (O), Small oh (o), Big omega (Ω),	
	Small omega (ω), Theta (Θ), Geometrical Interpretation of each	
	Asymptotic Notation	
	Properties of Big oh (O) Asymptotic Notations, Time-Space tradeoff.	
2	Array Data Structure: Representation Linear Array in Memory,	5
	Representation of Two-Dimensional Array in Memory, Representation of Multidimensional Array in Memory	
	Operations on Array Data Structure: Traversing Linear Array, Insertion Operation (Time complexity Analysis :Best Case Analysis, Worst Case Analysis), Deletion Operation (Time complexity Analysis: Best Case Analysis, Worst Case Analysis), Binary Search Algorithm (Time complexity Analysis :Best Case Analysis, Worst Case Analysis), Searching: Linear Search and Binary Search Techniques and their complexity analysis. Sparse Matrix: Definition, Different Types of Sparse Matrices,	
	Representation of Sparse Matrix using Array	
3	Linked List: Classification of Linked List, Classification of Linked List with respect to Implementation (Static Linked List and Dynamic	5
	Linked List), Representation in memory,	
	Operations on Single Linked List: Creation of Single Dynamic Linked	
	List, Display the Linked List (Iterative and recursive Algorithms),	
	Searching Operation, Insertion Operation, Deletion Operation, Reverse	
	Print the Linked List (Iterative and Recursive Method), Reverse the	
	Linked List.	
	Circular Linked Lists: all operations their algorithms and the complexity analysis	
4	Stacks and Oueues:	5
	Stack: ADT Stack and its operations, Algorithms and their complexity	-
	Application of stack: Transformation of Infix Arithmetic Expression	
	into Equivalent Postfix Expression. Evaluation of Postfix Expression.	
	Recursion, Tower of Hanoi Problem - corresponding Algorithms and	
	Complexity Analysis.	
	Oueue: ADT queue, Classification of Queue: Linear Queue, Double	
	ended Oueue. Priority Oueue and Circular Oueue.	
	Queue Classification with respect to Implementation: Static	
	Queue (using array) & Dynamic Queue (using Dynamic Linked	
	List),Representation Static Linear Queue, Operations on Static	
	Queue: Insertion, Deletion, Display	
	Representation Dynamic Linear Queue, Operations on Dynamic	
	Queue: Insertion, Deletion, Display	
	Circular Queue: Advantage of Circular Queue over Linear Queue, and	

	Implementation (Insertion, Deletion & Display) using Array	
5	Trees: Definition of Tree, Binary Trees, Complete Binary Trees,	9
	Extended Binary Trees: 2-Trees,	
	Representation Binary Trees in Memory:Linked Representation of	
	Binary Trees, Sequential Representation of Binary Trees,	
	Different types of Binary Trees: Binary Tree, Threaded Binary Tree,	
	Binary	
	Search Tree, AVL Tree;	
	Traversing Binary Trees: Preorder Traversal, Inorder Traversal	
	,Postorder Traversal ,	
	Threaded Binary Trees:Inorder Threading (One Way / Two Way),	
	Preorder Threading (One Way / Two Way),	
	Binary Search Trees (BST): Searching in BST, Inserting in BST,	
	Complexity of the Searching Algorithm in BST, Deleting in a BST,	
	Problems of BST,	
	AVL Search Trees: Definition, Different types of rotations techniques,	
	Insertion in an AVL Search Trees, Deletion Operation, Advantage of	
	AVL Search tree over BST, Heap Trees (Max / Min Heap), Inserting	
	into a Heap, Deleting the Root of a Heap tree,	
	Tree operations on each of the trees and their algorithms with	
	complexity	
	analysis.	
	General Trees: m- Way Search Trees, B Trees, B+ - Trees	
	Applications of Binary Trees, BST, Heap Trees, B Tree, B+ Tree:	
	definitions, algorithms and analysis	
	Craph. Dagia Tarminalogias and Danvagantations. Craph goardh and	
	traversal	
	algorithms (BES & DES) and complexity analysis	
	algorithms (DF5 & DF5) and complexity analysis.	
6	Sorting: Objective and properties of different sorting algorithms:	6
	Selection Sort, Bubble Sort, Modified Bubble Sort, Insertion Sort, Ouick	
	Sort, Merge Sort, Heap	
	Sort; Radix Sort.	
	Performance Analysis and Comparison among all the sorting methods,	
	Hashing: Definition, Properties of good Hash function, Importance	
	Hashing technique, Different Types of Hashing Technique	
Text	book and Reference books:	
	1. "Fundamentals of Data Structures of C" by Ellis Horowitz, SartajSał	nni, Susan
	Andersonfreed.	
	2. "Data Structures in C" by Aaron M. Tenenbaum.	
<u> </u>	3. "Data Structures" by S. Lipschutz.	
Cours	se Outcomes	
	At the end of this course, students will demonstrate the ability to	1
	PUC-US302.1 Differentiate how the choices of data structure &	algorithm
	methodsimpact the performance of program.	.l
	PUL-US302.2 Solve problems based upon different data structure & a	also write

programs. PCC-CS302.3 Identify appropriate data structure & algorithmic methods in solvingproblem. PCC-CS302.4 Discuss the computational efficiency of the principal algorithms for sorting, searching, and hashing PCC-CS302.5 Compare and contrast the benefits of dynamic and static data structures implementations.

Essence of Traditional Knowledge Code: MC301		
Contact: 3L		
Name of the Course:	Essence of Tradition	al Knowledge
Course Code: MC301	Semester: III	
Duration: 6 months	Maximum Marks: 100	
Teaching Scheme		Examination Scheme
Theory: 3 hrs./week		Mid Semester exam: 15
Tutorial: NIL		Assignment and Quiz: 10 marks
Practical: hrs./week		Attendance: 5 marks
		End Semester Exam : 70 Marks
Credit Points:	0	

Objective:

1	To facilitate the students with the concepts of Indian traditional knowledge and
	to make them understand the Importance of roots of knowledge system.
2	To make the students understand the traditional knowledge and analyse it and
	apply it to their day to day life

Pre-Requisite

Unit	Content	Hours
		or
		lectures
1	Introduction to traditional knowledge: Define traditional knowledge,	6
	nature and characteristics, scope and importance, kinds of traditional	
	knowledge, Indigenous Knowledge (IK), characteristics, traditional	
	knowledge vis-a-vis indigenous knowledge, traditional knowledge Vs	
	western knowledge traditional knowledge	
2	Protection of traditional knowledge: The need for protecting	6
	traditional knowledge Significance of TK Protection, value of TK in	
	global economy, Role of Government to harness TK.	
3	Legal framework and TK: The Scheduled Tribes and Other Traditional	6
	Forest Dwellers (Recognition of Forest Rights) Act, 2006, Plant	
	Varieties Protection and Farmer's Rights Act, 2001 (PPVFR Act); The	
	Biological Diversity Act 2002 and Rules 2004, the protection of	
	traditional knowledge bill, 2016.	
4	Traditional knowledge and intellectual property: Systems of	8
	traditional knowledge protection, Legal concepts for the protection of	

	traditional knowledge, Patents and traditional knowledge, Strategies to increase protection of traditional knowledge	
5	Traditional Knowledge in Different Sectors: Traditional knowledge and engineering, Traditional medicine system, TK in agriculture, Traditional societies depend on it for their food and healthcare needs, Importance of conservation and sustainable development of environment, Management of biodiversity, Food security of the country and protection of TK	8
Text	book and Reference books:	
	1. Traditional Knowledge System in India, by Amit Jha, 2009.	
	Reference Books:	
	1. Traditional Knowledge System in India by Amit Jha Atlantic publisher	s, 2002.
	2. "Knowledge Traditions and Practices of India" Kapil Kapoor1, Michel	Danino2.
	Web Links:	
	1.https://www.youtube.com/watch?v=LZP1StpYEPM	
	2.http://nptel.ac.in/courses/121106003/	
Cours	se Outcomes	
	MC301.1: Identify the concept of Traditional knowledge and its importa	nce.
	MC301.2: Explain the need and importance of protecting traditional kno	wledge.
	MC301.3: Illustrate the various enactments related to the prot	ection of
	traditional knowledge.	
	MC301.4: Interpret the concepts of Intellectual property to protect the t	raditional
	knowledge.	
	MC301.5: Explain the importance of Traditional knowledge in Agricu	lture and
	Medicine.

IT Workshop (Python/R/Sci Lab/ MATLAB)			
Code	e: PCC-CS393		
Cont	tact: 4P	1	
Name	e of the Course:	IT Workshop (Pyth	on/R/Sci Lab/MATLAB)
Cours	se Code: PCC-CS393	Semester: III	IT Workshop (Python/R/Sci Lab/MATLAB)
Durat	tion: 6 months	Maximum Marks: 100	
Teach	ning Scheme		Examination Scheme
Theor	ry:		Distribution of marks
Tutor	rial: NIL		Continuous Internal Assessment: 60
Pract	ical: 4hrs./week		External Assessment: 40
Credi	t Points:	2	
Cour	se Outcomes		
1	To master an unde	erstanding of scripting & t	he contributions of scripting
	languages.		
2	Design real life pro	oblems and think creative	ly about solutions.
3	Apply a solution in	n a program using R/Matla	ab/Python.
4	To be exposed to a	advanced applications of n	nathematics, engineering and
	natural sciences to	o program real life problem	ns.
Pre-l	Requisite		
	Knowledge of Prog	gramming Logic.	
	Experience with a	high level language (C/C+	+) is suggested.
	Prior knowledge o	f a scripting language and	Object-Oriented concepts is
	helpful but not ma	ndatory.	
A) Pro	ogramming in R:		
	1. Introduction to mechanism for statistics, data analysis, and machine learning; Introduction of R Programming, How to install and run R, Use of R help files, R Sessions, R Objects – Vectors, Attributes, Matrices, Array, Class, List, Data Frames etc. Operators in R.		
	2. R Programming Structures, Control Statements, Loops, Repeat and Break, R-Function, R- Vector Function, Recursive Function in R.		
	3. R Packages (Install and Use), Input/Output Features in R, Reading or Writing in File. Data Manipulation in R. Rearranging data, Random Number and Simulation, Statistical methods like min, max, median, mean, length, Linear Regression, Normal Distribution, Decision tree.		
	4. Graphics, Cr Functions – Custor	eating Graphs, The Workl nizing Graphs, Saving Gra	norse of R Base Graphics, Graphical aphs to Files, Pie chart, Bar Chart,

	Histogram.
	Text book and Reference books:
	Dr. Jeeva Jose, Begineer's Guide for Data Analysis Using R Programming,
	Khanna Publishing House, New Delhi.
B)	Programming in Matlab:
	Introduction
	Why MATLAB?, History, Its strengths, Competitors, Starting MATLAB, Using MATLAB as a calculator, Quitting MATLAB.
	Basics
	Familiar with MATLAB windows, Basic Operations, MATLAB-Data types, Rules about variable names, Predefined variables.
	Programming-I
	Vector, Matrix, Array Addressing, Built-in functions, Mathematical Operations, Dealing with strings (Array of characters), Array of array (cell) concept.
	Programming-II
	Script file, Input commands, Output commands, Structure of function file, Inline functions, Feval command, Comparison between script file and function file.
	Conditional statements and Loop
	Relational and Logical Operators, If-else statements, Switch-case statements, For loop, While loop, Special commands (Break and continue), Import data from large database, Export data to own file or database.
	2D Plotting
	In-built functions for plotting, Multiple plotting with special graphics, Curve fitting, Interpolation, Basic fitting interface.
	3D Plotting
	Use of meshgrid function, Mesh plot, Surface plot, Plots with special graphics.
C)	Programming with Python
	Introduction History Fastures Setting up path Working with Puthon Pasic Suntay
	Variable and Data Types, Operator.
	Conditional Statements
	If, If- else, Nested if-else, Looping, For, While, Nested loops.
	Control Statements
	Break, Continue, Pass.
	String Manipulation

	Accessing Strings, Basic Operations, String slices, Function and Methods.
	Lists Introduction, Accessing list, Operations, Working with lists, Function and Methods.
	Tuple Introduction, Accessing tuples, Operations, Working, Functions and Methods.
	Dictionaries Introduction, Accessing values in dictionaries, Working with dictionaries, Properties.
	Functions Defining a function, Calling a function, Types of functions, Function Arguments, Anonymous functions, Global and local variables.
	Modules Importing module, Math module, Random module, Packages, Composition, Input-Output Printing on screen, Reading data from keyboard, Opening and closing file, Reading and writing files, Functions.
	Exception Handling Exception, Exception Handling, Except clause, Try? finally clause, User Defined Exceptions.
Labor	ratory Experiments:
1	Practical Assignments related with implementation of PCC-CS393
1

Credit Points:	3		

Obje	ctive:
1	To learn the basics of stored program concepts.
2	To learn the principles of pipelining.
3	To learn mechanism of data storage.

4	To distinguish between the concepts of serial, parallel, pipeline architecture.			
Pre-Requisite				
1	Fundamentals of computer organization and digital electronics			
Unit	Content	Hours		
		or		
		lectures		
1	Introduction: Review of basic computer architecture (Revisited),	12		
	Quantitative techniques in computer design, measuring and reporting			
	performance. (2L)			
	Pipelining: Basic concepts, instruction and arithmetic pipeline, data			
	hazards, control hazards and structural hazards, techniques for			
	handling hazards. Exception handling. Pipeline optimization			
	techniques; Compiler techniques for improving performance (4L)			
	Non-linear pipelining: Basic concepts, reservation table, permissible			
	and forbidden latencies, state transition diagram, simple cycle, greedy			
	cycle, MAL, throughput, efficiency computation (6L)			
2	Hierarchical memory technology: Inclusion, Coherence and locality	8		
	properties; Cache memory organizations, Techniques for reducing			
	cache misses; Virtual memory organization, mapping and			
_	management techniques, memory replacement policies. (8L)			
3	Instruction-level parallelism: basic concepts, techniques for increasing	6		
	ILP, superscalar, super- pipelined and VLIW processor architectures.			
	Array and vector processors. (6L)	10		
4	Multiprocessor architecture: taxonomy of parallel architectures;	10		
	Centralized shared- memory architecture: synchronization, memory			
	consistency, interconnection networks. Distributed shared- memory			
	architecture. Cluster computers (6L). Non von Neumann			
	architectures: data now computers, reduction computer architectures,			
	systolic architectures (4L)

	8. Algorithms Design and Analysis, Udit Agarwal, Dhanpat Rai.
Cours	e Outcomes
	On completion of the course students will be able to
	PCC-CS402.1: For a given algorithms analyze worst-case running times of
	algorithms based on asymptotic analysis and justify the correctness of
	algorithms.
	PCC-CS402.2: Describe the greedy paradigm and explain when an algorithmic
	design situation calls for it. For a given problem develop the greedy algorithms.
	PCC-CS402.3: Describe the divide-and-conquer paradigm and explain when an
	algorithmic design situation calls for it Synthesize divide-and-conquer
	algorithms Derive and solve recurrence relation
	PCC-CS402 4: Describe the dynamic-programming paradigm and explain when
	an algorithmic design situation calls for it. For a given problem develop the
	dimanic programming algorithms
	DCC CS402.5. Develop the dynamic programming algorithms, and analyze it to
	determine its computational complexity
	Dec CC402 (For a since an since we have model it using such and write
	PCC-CS402.6: For a given engineering problem model it using graph and write
	the corresponding algorithm to solve the problems.
	PUC-US402.7: Explain the ways to analyze randomized algorithms (expected
	running time, probability of error J.
	PCC-CS402.8: Explain what an approximation algorithm is. Compute the
	approximation factor of an approximation algorithm (PTAS and FPTAS).

Object Oriented Programming			
Code: PCC-CS403			
Contact: 3L			
Name of the Course:	Object Oriented Prog	gramming	
Course Code: PCC-CS403	Semester: IV		
Duration: 6 months	Maximum Marks: 100

Cour	se Outcomes	
	On completion of the course students will be able to	
	PCC-CS403.1. Specify simple abstract data types and design implem	entations,
	using abstraction functions to document them.	
	PCC-CS403.2. Recognise features of object-oriented design such as enca	psulation,
	polymorphism, inheritance, and composition of systems based on object	t identity.
	PCC-CS403.3. Name and apply some common object-oriented design	patterns
	and give examples of their use.	
	PCC-CS403.4. Design applications with an event-driven graphical user in	nterface.

Name of the Course:

Formal Language and Automata Theory

Cours	e Code: PCC-CS404	Semester: IV		
Durat	tion: 6 months	Maximum Marks: 100		
Teaching Scheme			Examination Scheme	
Theory: 3 hrs./week			Mid Semester exam: 1	5
Tutorial: NIL			Assignment and Quiz:	10 marks
Pract	ical: hrs./week		Attendance: 5 marks	
			End Semester Exam : 7	70 Marks
Credi	t Points:	3		
Objec	ctive:			
1	Be able to construct	t finite state machines and the	equivalent regular exp	ressions.
2	Be able to prove the	e equivalence of languages de	escribed by finite state	machines
2	and regular express	lons	d the equivalent ex	tout free
3	Be able to constr	able to prove the equivale	id the equivalent cor	itext iree
	grammars. And De	able to prove the equivale	ence of languages des	cribed by
4	Be able to construct	Turing machines and Post m	achines. Reable to prov	ve the
	equivalence of lang	lages described by Turing ma	chines and Post machin	les
Pre-R	equivalence of lang			
1	Grammar and its cla	ssification (Context Free Gra	mmar)

Environmental Science				
Code	Code: MC401			
Cont	tact: 3L			
Name	e of the Course:	Environmental Scienc	e	
Cours	se Code: MC401	Semester: IV		
Durat	tion: 6 months	Maximum Marks: 100		
Teach	ning Scheme		Examination Scheme	
Theor	ry: 3 hrs./week		Mid Semester exam: 15	
Tutor	rial: NIL		Assignment and Quiz: 10 marks	
Pract	ical: hrs./week		Attendance: 5 marks	
			End Semester Exam : 70 Marks	
Credi	t Points:	0		
Obje	ctive:			
1	Be able to understand the natural environment and its relationships with human activities.			
2	Be able to apply the fundamental knowledge of science and engineering to assess environmental and health risk.			
3	Be able to understand environmental laws and regulations to develop guidelines and procedures for health and safety issues.			
4	Be able to solve science pollution	entific problem-solving relate	ed to air, water, noise & land	

Pre-R	Pre-Requisite			
1	Basic knowledge of Environmental science			
Unit	Content	Hours		
		0r locturos		
1	Pasia ideas of anyironment basis concents man society &	6		
	environment, their interrelationship (1L) Mathematics of population growth and associated problems,			
	definition of resource, types of resource, renewable, non-renewable, potentially renewable, effect of excessive use vis-à-vis population growth, Sustainable Development. (2L)			
	Materials balance: Steady state conservation system, steady state system with non-conservative pollutants, step function. (1L)			
	Environmental degradation: Natural environmental Hazards like Flood, earthquake, Landslide-causes, effects and control/management; Anthropogenic degradation like Acid rain- cause, effects and control. Nature and scope of Environmental			
	Science and Engineering. (2L)			
2	Elements of ecology: System, open system, closed system, definition of ecology, species, population, community, definition of ecosystem-components types and function. (1L)	6		
	Structure and function of the following ecosystem: Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, Mangrove ecosystem (special reference to Sundar ban); Food chain [definition and one example of each food chain], Food web.(2L)			
	Biogeochemical Cycle- definition, significance, flow chart of different cycles with only elementary reaction [Oxygen, carbon, Nitrogen, Phosphate, Sulphur].(1L)			
	Biodiversity- types, importance, Endemic species, Biodiversity Hot- spot, Threats to biodiversity, Conservation of biodiversity.(2L)			
3	Atmospheric Composition: Troposphere, Stratosphere, Mesosphere, Thermosphere, Tropopause and Mesopause. (1L)	11		
	Energy balance: Conductive and Convective heat transfer, radiation heat transfer, simple global temperature model [Earth as a black body, earth as albedo], Problems.(1L)			
	Green house effects: Definition, impact of greenhouse gases on the global climate and consequently on sea water level, agriculture and marine food. Global warming and its consequence, Control of Global warming. Earth's heat budget.(1L)			
	Lapse rate: Ambient lapse rate Adiabatic lapse rate, atmospheric stability,			

	temperature inversion (radiation inversion).(2L)	
	Atmospheric dispersion: Maximum mixing depth, ventilation coefficient, effective stack height, smokestack plumes and Gaussian plume model.(2L)	
	Definition of pollutants and contaminants, Primary and secondary pollutants: emission standard, criteria pollutant. Sources and effect of different air pollutants- Suspended particulate matter, oxides of carbon, oxides of nitrogen, oxides of sulphur, particulate, PAN. (2L)	
	Smog, Photochemical smog and London smog. Depletion Ozone layer: CFC, destruction of ozone layer by CFC, impact of other green-house gases, effect of ozone modification. (1L)	
	Standards and control measures: Industrial, commercial and residential air quality standard, control measure (ESP. cyclone separator, bag house, catalytic converter, scrubber (ventury), Statement with brief reference). (1L)	
4	Hydrosphere, Hydrological cycle and Natural water. Pollutants of water, their origin and effects: Oxygen demanding wastes, pathogens, nutrients, Salts, thermal application, heavy metals, pesticides, volatile organic compounds. (2L)	9
	River/Lake/ground water pollution: River: DO, 5-day BOD test, Seeded BOD test, BOD reaction rate constants, Effect of oxygen demanding wastes on river [deoxygenation, reaeration], COD, Oil, Greases, pH. (2L)	
	Lake: Eutrophication [Definition, source and effect]. (1L)	
	Ground water: Aquifers, hydraulic gradient, ground water flow (Definition only)(1L)	
	Standard and control: Waste water standard [BOD, COD, Oil, Grease], Water Treatment system [coagulation and flocculation, sedimentation and filtration, disinfection, hardness and alkalinity, softening] Waste water treatment system, primary and secondary treatments [Trickling filters, rotating biological contractor, Activated sludge, sludge treatment, oxidation ponds] tertiary treatment definition. (2L)	
	Water pollution due to the toxic elements and their biochemical effects: Lead, Mercury, Cadmium, and Arsenic (1L)	
5	Lithosphere; Internal structure of earth, rock and soil (1L)	3

	Solid Waste: Municipal, industrial, commercial, agricultural, domestic, pathological and hazardous solid wastes; Recovery and disposal method- Open dumping, Land filling, incineration, composting, recycling. Solid waste management and control (hazardous and biomedical waste).(2L)		
6	Definition of noise, effect of noise pollution, noise classification	2	
	[Transport noise, occupational noise, neighbourhood noise] (1L)		
	Definition of noise frequency, noise pressure, noise intensity, noise		
	threshold limit value, equivalent noise level, L10 (18hr Index) , Land.		
	Noise pollution control. (1L)		
7	Environmental impact assessment, Environmental Audit,	2	
	Environmental laws and protection act of India, Different		
	international environmental treaty/ agreement/ protocol. (2L)		
Text	book and Reference books:		
	1. M.P. Poonia & S.C. Sharma, Environmental Studies, Khanna Publishing House

Cours	se Outcomes		
	On completion of the course students will be able to		
	MC-401.1 To understand the natural environment and its relationships with		
	human activities.		
	MU-401.2 To apply the fundamental knowledge of science and engineering to		
	assess environmental and health risk.		
	MC-401.3 To develop guidelines and procedures for health and safety issues		
	MC-401.4 Acquire skills for scientific problem-solving related to air w'	ter noise	
	& land nollution	10130	
	& land pollution.		

Computer Architecture Lab		
Code: PCC-CS491		
Contact: 4P		
Name of the Course:	Computer Architectu	ire Lab
Course Code: PCC-CS491	Semester: III	
Duration: 6 months	Maximum Marks: 100	
Teaching Scheme		Examination Scheme
Theory:		Distribution of marks
Tutorial: NIL		Internal Assessment: 60
Practical: 4hrs./week		External Assessment: 40
Credit Points:	2	
Pre-Requisite		

1	The hardware based design has been done in the Digital Electronics laboratory and
	Computer Organisation laboratory
Labor	atory Experiments:
Exper	riments with HDL
1	HDL introduction. 2 3 4 5 6 7 8
2	Basic digital logic base programming with HDL
3	8-bit Addition, Multiplication, Division
4	8-bit Register design
5	8-bit simple ALU design
6	Memory unit design and perform memory operations.
7	8-bit simple CPU design
8	Interfacing of CPU and Memory.
Expe	riments with programming language C and Python
9	Design a program in C or Python for non linear pipelining to derive ICV from a
	given reservation table.
10	Design a program in C or Python for non linear pipelining to derive Simple and
	greedy cycle, and MAL from a state transition diagram derived with ICV.
11	Design a program in C or Python to derive page fault for different types of page
	replacement policies (FIFO, LRU, Optimal)
Cours	se Outcomes
	PCC-CS401.1
	PCC-CS401.2
	PCC-CS401.3

Design and Analysis of Algorithms Lab		
Code: PCC-CS492		
Contact: 4P		
Name of the Course:	Design and Analysis of Algorithms Lab	
Course Code: PCC-CS492	Semester: III	
Duration: 6 months	Maximum Marks: 100	
Teaching Scheme		Examination Scheme
Theory:		Distribution of marks
Tutorial: NIL		Internal Assessment: 60
Practical: 4hrs./week		External Assessment: 40
Credit Points:	2	
Pre-Requisite		
1 Pre-Requisite as in : PCC-CS402		
Laboratory Experiments:		
Divide and Conquer:		
1 Implement Binary	Implement Binary Search using Divide and Conquer approach	
Implement Merge Sort using Divide and Conquer approach		

2	Implement Quick Sort using Divide and Conquer approach		
	Find Maximum and Minimum element from a array of integer using Divide and		
	Conquer approach		
3	Find the minimum number of scalar multiplication needed for chain of		
	matrix		
4	Implement all pair of Shortest path for a graph (Floyed- Warshall Algorithm)		
	Implement Traveling Salesman Problem		
5	Implement Single Source shortest Path for a graph (Dijkstra , Bellman Ford		
	Algorithm)		
Brunc	h and Bound:		
6	Implement 15 Puzzle Problem		
Backt	racking:		
7	Implement 8 Queen problem		
8	Implement Graph Coloring Problem		
	Implement Hamiltonian Problem		
Gree	dy method		
9	Implement Knapsack Problem, Implement Job sequencing with deadlines		
10	0 Implement Minimum Cost Spanning Tree by Prim		
	Algorithm and Minimum Cost Spanning Tree by Kruskal Algorithm		
Grap	h Traversal Algorithms:		
11	Implement Breadth First Search (BFS) and Implement Depth First Search (DFS)		
Cours	se Outcomes		
	PCC-CS402.1		
	PCC-CS402.2		
	PCC-CS402.3		
	PCC-CS402.4		
	PCC-CS402.5		
	PCC-CS402.6		
	PCC-CS402.7		
	PCC-CS402.8		
-			

Object Oriented Programming Lab		
Code: PCC-CS493		
Contact: 4P		
Name of the Course:	Object Oriented Programming Lab	
Course Code: PCC-CS493	Semester: III	
Duration: 6 months	Maximum Marks: 100	
Teaching Scheme		Examination Scheme
Theory:		Distribution of marks
Tutorial: NIL		Internal Assessment: 60
Practical: 4hrs./week		External Assessment: 40
Credit Points:	2	
Pre-Requisite		
1 Pre-Requisite as in :	PCC-CS403	

Laboratory Experiments:		
Use Java for programming		
1	Assignments on class, constructor, overloading, inheritance, overriding	
2	Assignments on wrapper class, arrays	
3	Assignments on developing interfaces- multiple inheritance, extending interfaces	
4	Assignments on creating and accessing packages	
5	Assignments on multithreaded programming	
6	Assignments on applet programming	
Cours	se Outcomes
